BS - 201 Optics and Waves							
L	T	P	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3h
Purpose	To introduce the fundamentals of wave and optics for the applications in Engineering field.						
Course Outcomes							
CO 1	Familiarize with basic phenomenon used in propagation of waves.						
CO 2	Introduce the fundamentals of interference, diffraction, polarization and their applications.						
CO 3	To make the students aware to the importance of Laser in technology.						

Unit - I

Waves: Travelling waves, Characteristics of waves, Mathematical representation of travelling waves, General wave equation, Phase velocity, Light source emit wave packets, Wave packet and Bandwidth, Group velocity and real light waves.

Propagation of light waves: Maxwell's equations, Electromagnetic waves and constitutive relations, Wave equation for free-space, Uniform plane waves, Wave polarization, Energy density, the pointing vector and intensity, Radiation pressure and momentum, Light waves at boundaries, Wave incident normally on boundary, Wave incident obliquely on boundary: law of reflection, Snell's law and reflection coefficients.

Unit - II

Interference: Principle of Superposition, Conditions for Sustained interference, Young's double slit experiment, Division of wave-front: Fresnel's Biprism and its applications, Division of amplitude: Interference due to reflected and transmitted light, Wedge-shaped thin film, Newton's rings and its applications, Michelson Interferometer and its applications.

Unit - III

Diffraction: Types of diffraction, Fraunhofer diffraction at a single slit, Plane transmission diffraction grating: theory, secondary maxima and secondary minima, width of principal maxima, absent spectra, overlapping of spectral lines, determination of wavelength; Dispersive power and resolving power of diffraction grating.

Polarization: Polarization of transverse waves, Plane of polarization, Polarization by reflection, Double refraction, Nicol Prism, Quarter and half wave plate, Specific Rotation, Laurent 's half shade polarimeter, Biquartz polarimeter.

Unit - IV

Laser: Stimulated Absorption, Spontaneous and Stimulated Emission; Einstein's Coefficients and its derivation, Population Inversion, Direct and Indirect pumping, Pumping schemes, Main components of Laser, Gas lasers (He-Ne, CO₂), Solid state lasers (Ruby, Neodymium, semiconductor), Dye laser, Characteristics of Laser, Applications of Laser.

Text/Reference Books:

1. P.K. Diwan, Applied Physics for Engineers, *Wiley India Pvt. Ltd., India*
2. N. Subrahmanyam, B. Lal, M.N. Avadhanulu, A Textbook of Optics, *S. Chand & Company Ltd., India.*
3. A. Ghatak, Optics, *McGraw Hill Education (India) Pvt. Ltd., India.*
4. E. Hecht, A.R. Ganesan, Optics, *Pearson India Education Services Pvt. Lt., India.*

Note: The Examiner will be given the question paper template and will have to set the question paper according to the template provided along with the syllabus.

EC-201							
Electronic Devices							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
CO1	To understand the concept of carrier transport phenomena in semiconductors and diodes such as p-n junction diode and tunnel diode.						
CO2	To understand the detailed operation of BJT and calculation of its parameters using transistor models.						
CO3	To understand the operation, characteristics & parameters of FET and MOSFET.						
CO4	To understand the concept of different types of regulated power supplies and Op-Amp based voltage regulators						

UNIT-I

Charge Carriers Transport : Energy bands in intrinsic and extrinsic silicon; Carrier transport: diffusion current, drift current, mobility and resistivity; Generation and recombination of carriers; Continuity equation, PN Junction: Basic Structure, small signal equivalent circuit of p-n diode, derivation of barrier potential and diode current equation, Simple diode circuits: clipping, clamping and rectifiers, Zener diode and its application as voltage regulator.

UNIT-II

Bipolar Junction Transistor: Basic principle of operation, Current gains : derivation of α, β, Y and their relationship. Various modes of operation of BJT, Base Width Modulation, Transistor hybrid model, h-parameter equivalent circuit of transistor, Analysis of transistor amplifier using h-parameters, calculation of input impedance, output impedance and voltage gain.

UNIT-III

Field Effect Devices: JFET : basic Operation and characteristics, drain and transfer characteristics, pinch off voltage, parameters of JFET: Transconductance (g_m), ac drain resistance (r_d), amplification factor (μ), Small Signal Model & Frequency Limitations. MOSFET: basic operation, depletion and enhancement type, pinch-off voltage, Shockley equation and Small Signal Model of MOSFET, MOS capacitor.

UNIT-IV

Regulated Power Supplies: Voltage Regulation, block diagram of DC regulated power supply, Zener diode voltage regulators: transistor series voltage regulator, Transistor shunt voltage regulator, Controlled Transistor Voltage Regulator, Op-Amp Series and shunt voltage regulator.

Text Books:

1. Millman & Halkias: Integrated Electronics, TMH.
2. Boylestad & Nashelsky: Electronic Devices & Circuit Theory, PHI.

Reference Books:

1. B.G. Streetman, Solid State Electronic Devices, Prentice Hall of India, New Delhi, 1995.
2. E S. Yang, Microelectronic Devices, McGraw Hill, Singapore, 1988.
3. A.S. Sedra and K.C. Smith, Microelectronic Circuits, Saunder's College Publishing, 1991.
4. S Salivahanan and N Naresh Kumar, Electronics devices and circuits, McGraw Hill, 1998.

Note: Separate paper template will be provided to the paper setter for setting the question paper of end term semester examinations.

EC-203L		Electronic Devices Lab					
Lecture	Tutorial	Practical	Credit	Practical	Minor Test	Total	Time
-	-	2	1	60	40	100	3 Hrs.
Course Outcomes (CO)							
CO1	To teach the students how to experimentally plot the VI characteristics of various diodes such as p-n diode, zener diode etc. find the threshold voltage and zener breakdown voltage from the VI curve.						
CO2	To teach the students how to experimentally find the values of various parameters of Transistor such as voltage gain, current gain etc.						
CO3	To teach the students how to plot the input and output characteristics of FET and MOSFET by experimental method.						
CO4	To experimentally teach the students the concept of different configurations of regulated power supplies using Zener diodes and Op-Amp.						

List of experiments:

1. To study the VI characteristics of p-n diode in forward and reverse bias and find the threshold voltage from the VI curve.
2. To study the operation of Zener diode as a voltage regulator.
3. To study the operation of half-wave and full wave rectifiers and calculate their ripple factor values.
4. To study the operation of series and parallel Clippers using P-N junction diodes.
5. To study the operation of clampers using P-N junction diodes.
6. To experimentally plot the input and output characteristics of a given BJT transistor in CE configuration and calculate its various parameters.
7. To experimentally plot the input and output characteristics of a given BJT transistor in CB configuration and calculate its various parameters.
8. To study the transfer and drain characteristics of JFET and calculate its various parameters.
9. To study the transfer and drain characteristics of MOSFET and calculate its various parameters.
10. To study the different types of negative feedback in two stage amplifier and to observe its effects upon the amplifier parameters.
11. To study the Zener diode as a transistor series voltage regulator.
12. To study the Zener diode as a transistor shunt voltage regulator.

Reference Books:

1. Millman & Halkias: Integrated Electronics, TMH.
2. Boylestad & Nashelsky: Electronic Devices & Circuit Theory, PHI.

Note: Atleast ten (10) experiments from the above list are mandatory to perform for the students.

EC-205	Digital Electronics						
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
CO1	Students will be able to understand the basic logic gates and will be able to apply minimization techniques for reducing a function upto six variables.						
CO2	Students will be able to design combinational circuits and applications related to them.						
CO3	Students will be able to write the truth table, excitation table, characteristic equations of various flip flops and to design the sequential circuits using Flip flops.						
CO4	Students will be able to familiarize with varied memory types and various A/D, D/A Converters and their characteristics.						

UNIT-I

Fundamentals of Digital Systems and Techniques: Digital signals, AND, OR, NOT, NAND, NOR and Exclusive-OR operations, Boolean algebra, number systems: binary, signed binary, octal, hexadecimal number, binary arithmetic, one's and two's complements arithmetic, Codes: BCD codes, Excess-3, Gray codes, Error detecting and correcting codes: parity check codes and Hamming code

Minimization Techniques: Basic postulates and fundamental theorems of Boolean algebra: Standard representation of logic functions: SOP and POS forms, Simplification of switching functions using K-map and Quine-McCluskey tabular methods, Don't care conditions, Digital logic families: TTL, Schottky TTL and CMOS logic, interfacing CMOS and TTL, Tri-state logic.

UNIT-II

Combinational Digital Circuits: Design procedure: Half adder, Full Adder, Half subtractor, Full subtractor, Parallel binary adder, parallel binary Subtractor, Carry Look Ahead adder, Serial Adder/Subtractor, BCD adder, Binary Multiplier, Binary Divider, Multiplexer/ De-multiplexer, decoder, encoder, parity checker, parity generators, code converters, Magnitude Comparator.

UNIT-III

Sequential circuits: A 1-bit memory, the circuit properties of Bistable latch, the clocked SR flip flop, J- K, T and D types flip flops, applications of flip flops: shift registers, serial to parallel converter, parallel to serial converter, Synchronous and Asynchronous mod counter, FSM, sequence generator and detector.

UNIT-IV

A/D and D/A Converters: Digital to analog converters: weighted resistor/converter, R-2R Ladder D/A converter, specifications for D/A converters, analog to digital converters: quantization and encoding, parallel comparator A/D converter, successive approximation A/D converter, specifications for A/D converters
Semiconductor Memories and Programmable Logic Devices: Characteristics of memories, read only memory (ROM), read and write memory (RAM), Programmable logic array, Programmable array logic, Introduction to Field Programmable Gate Array (FPGA)

Text Books:

1. M. M. Mano, "Digital design", Pearson Education India, 2016.
2. Donald P. Leach and Albert Paul Malvino, Digital Principles and Applications, 8th Edition, TMH, 2003.
3. Taub Schilling, Digital Integrated Electronics, TMH

Reference Books:

1. A. Kumar, "Fundamentals of Digital Circuits", Prentice Hall India, 2016.
2. A.K. Maini, Digital Electronics, Wiley India
3. R P Jain, Modern digital electronics, TMH

Note: Separate paper template will be provided to the paper setter for setting the question paper of end term semester examinations.

EC-207L							
Digital Electronics Lab							
Lecture	Tutorial	Practical	Credit	Practical	Minor Test	Total	Time
-	-	2	1	60	40	100	3 Hrs.
Course Outcomes (CO)							
CO1	Students will be able to verify truth tables of basic logic gates and design various gates using universal gates.						
CO2	Students will be able to design various combinational circuits and verify their operation.						
CO3	Students will be able to design different sequential circuits by using flip flops and verify their operation.						
CO4	Students will be to study and design various encoders and decoders.						

List of experiments:

1. Familiarization with Digital Trainer Kit and associated equipment.
2. Study of TTL gates AND, OR, NOT, NAND, NOR, EX-OR, EX-NOR.
3. Design and realize a given function using K-Maps and verify its performance.
4. To verify the operation of Multiplexer and De-multiplexer.
5. To verify the operation of Comparator.
6. To verify the truth table of S-R, J-K, T, D Flip-flops.
7. To verify the operation of Bi-directional shift register.
8. To design and verify the operation of 3-bit asynchronous counter.
9. To design and verify the operation of asynchronous Up/down counter.
10. To design and verify the operation of asynchronous Decade counter.
11. Study of Encoder and Decoder.
12. Study of BCD to 7 segment Decoder

Text Books:

1. M. M. Mano, "Digital design", Pearson Education India, 2016.
2. Donald P. Leach and Albert Paul Malvino, Digital Principles and Applications, 8th Edition, TMH, 2003.

Note:Atleast ten (10) experiments from the above list are mandatory to perform for the students.

ECE-209		Signals and Systems					
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
At the end of this course, students will demonstrate the ability to							
CO1	Analyze different types of signals.						
CO2	Represent continuous and discrete systems in time and frequency domain using different transforms.						
CO3	Understand sampling theorem and its implications.						

UNIT-I

Introduction to Signals: Continuous and discrete time signals, deterministic and stochastic signals, periodic and a periodic signals, even and odd signals, energy and power signals, exponential and sinusoidal signals and singular functions. Signal representation in terms of singular functions, orthogonal functions and their use in signal representation

Introduction to Systems: Linear and non-linear systems, time invariant and time varying systems, lumped and distributed systems, deterministic and stochastic systems, casual and non-causal systems, analog and discrete/digital memory and memory less systems.

UNIT-II

Random Variables: Introduction to Random Variables, pdf, cdf, moments, distributions, correlation functions.

Linear Time Invariant Systems: Introduction to linear time invariant (LTI) systems, properties of LTI systems, convolution integral, convolution sum, causal LTI systems described by differential and difference equations, Concept of impulse response.

UNIT-III

Discretization of Analog Signals: Introduction to sampling, sampling theorem and its proof, effect of undersampling, reconstruction of a signal from sampled signal.

Fourier Series : Continuous time Fourier series (CTFS), Properties of CTFS, Convergence of Fourier series, Discrete time Fourier Series (DTFS), Properties of DTFS , Fourier series and LTI system, Filtering.

UNIT-IV

Fourier Transform: Continuous Time Fourier Transform (CTFT), Properties of CTFT, Systems characterized by linear constant- coefficient differential equations, Discrete time fourier transform (DTFT), Properties of DTFT, Duality, Systems characterized by Linear constant coefficient difference equations.

Laplace Transform: Introduction to Laplace transform, Region of convergence for laplace transform, Inverse laplace transform, Properties of laplace transform, Analysis and characterization of LTI systems using laplace transform, System function algebra and block diagram representations, Unilateral laplace transform.

Text Books:

1. Alan V. Oppenheim, Alan S. Willsky, S. Hamid Nawab, Signals and Systems, Prentice Hall India, 2nd Edition, 2009

2. Tarun Kumar Rawat , Signals and Systems , Oxford University Press.
3. H. P. Hsu, “Signals and systems”, Schaum’s series, McGraw Hill Education, 2010.
4. M. J. Robert “Fundamentals of Signals and Systems”, McGraw Hill Education, 2007.
5. B. P. Lathi, “Linear Systems and Signals”, Oxford University Press, 2009.

Note: Question paper template will be provided to the paper setter.

ECE-211L		Signals & Systems Lab					
Lecture	Tutorial	Practical	Credit	Practical	Minor Test	Total	Time
-	-	2	1	60	40	100	3 Hrs.
Course Outcomes (CO)							
CO1	To understand the basic concepts of software.						
CO2	To explore properties of various types of signals and systems.						
CO3	To explore different properties of signals and systems.						
CO4	To understand the concept of sampling in time and frequency domain.						

List of experiments:

1. Introduction of the MATLAB/SciLab/Octave software.
2. To demonstrate some simple signal.
3. To explore the effect of transformation of signal parameters (amplitude-scaling, time-scaling and time- shifting).
4. To visualize the complex exponential signal and real sinusoids.
5. To identify a given system as linear or non-linear.
6. To explore the time variance and time invariance property of a given system.
7. To explore causality and non-causality property of a system.
8. To determine Fourier transform of a signal.
9. To determine Laplace transform of a signal.
10. To demonstrate the time domain sampling of bandlimited signals (Nyquist theorem).
11. To demonstrate the sampling in frequency domain (Discrete Fourier Transform).
12. To demonstrate the convolution and correlation of two continuous-time signals.
13. To demonstrate the convolution and correlation of two discrete-time signals.

Reference Books:

1. B. P. Lathi, "Linear Systems and Signals", Oxford University Press, 2009.
2. Signals and Systems using Scilab, www.scilab.in.
3. Signals and Systems using Octave, www.octave.org

Note: Atleast ten (10) experiments from the above list are mandatory to perform for the students.

EC-213		Network Theory					
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
CO1	To understand the concept of network topologies and the network analysis in the time domain for solving simple and complex circuits.						
CO2	Describe the circuit element models, network analysis using Laplace transform and time domain behavior from the pole-zero plots.						
CO3	Describe the characteristics & parameters of two port networks.						
CO4	To understand the concept of filters and synthesis of one port networks.						

UNIT I

INTRODUCTION: - Principles of network topology, graph matrices, Network Analysis (Time-Domain): Singularity Functions, Source-Free RC, RL, Series RLC, Parallel RLC circuits, Initial & Final Conditions, Impulse & Step Response of RC, RL, Series RLC, Parallel RLC circuits.

UNIT 2

NETWORK ANALYSIS (using Laplace Transform): - Circuit Element Models, Transient Response of RC, RL, RLC Circuits to various excitation signals such as step, ramp, impulse and sinusoidal excitations using Laplace transform.

NETWORK FUNCTIONS: - Terminal pairs or Ports, Network functions for one-port and two-port networks, poles and zeros of Network functions, Restrictions on pole and zero Locations for driving point functions and transfer functions.

UNIT 3

CHARACTERISTICS AND PARAMETERS OF TWO PORT NETWORKS: - Relationship of two-port variables, short-circuit admittance parameters, open circuit impedance parameters, transmission parameters, hybrid parameters, relationships between parameter sets, Inter-connection of two port networks.

UNIT 4

TYPES OF FILTERS AND THEIR CHARACTERISTICS: - Filter fundamentals, constant-k and m-derived low-pass and high-pass filters.

NETWORK SYNTHESIS: - Causality & Stability, Hurwitz Polynomials, Positive real functions, Synthesis of one port networks with two kind of elements.

TEXT BOOKS:

1. Fundamentals of Electric Circuits: Charles K. Alexander, Matthew N. O. Sadiku, McGraw Hill Education
2. Network Analysis: M.E. Van Valkenburg, PHI

REFERENCE BOOKS:

1. Network Analysis & Synthesis: F. F. Kuo, John Wiley.
2. Circuits & Networks: Sukhija & Nagsarkar, Oxford Higher Education.
3. Basic Circuit Theory: DasoerKuh, McGraw Hill Education.
4. Circuit Analysis: G.K. Mithal, Khanna Publication.

Note: Separate paper template will be provided to the paper setter for setting the question paper of end term semester examinations.

ES-201	Essentials of Information Technology						
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
CO1	Develop basic computational thinking. Learn how to reason with variables, state transitions, conditionals, and iteration						
CO2	Understand the notion of data types, and higher order data structures such as lists, tuples, and dictionaries.						
CO3	Develop a basic understanding of computer systems -architecture, OS, mobile and cloud computing.						
CO4	Learn basic SQL programming						

UNIT-I

Python Programming: Familiarization with the basics of Python programming, process of writing a program, running it, and print statements; simple data-types: integer, float, string. The notion of a variable, and methods to manipulate it, Knowledge of data types and operators: accepting input from the console, assignment statement, expressions, operators and their precedence. Conditional statements: if, if-else, if-elif-else; Notion of iterative computation and control flow: for, while, flowcharts, decision trees and pseudo code

UNIT-II

Idea of debugging: errors and exceptions; debugging: pdb, break points. Sequence datatype: Lists, tuples and dictionary, Introduce the notion of accessing elements in a collection using numbers and names. Sorting algorithm: bubble and insertion sort; count the number of operations while sorting. Strings: Strings in Python : compare, concat, substring. **Data visualization using Pyplot:** line chart, pie chart, and bar chart.

UNIT-III

Computer Systems and Organisation: description of a computer system and mobile system, CPU, memory, hard disk, I/O, battery, power. Types of software:Types of Software – System Software, Utility Software and Application Software, how an operating system runs a program, operating system as a resource manager. **Cloud Computing:** Concept of cloud computers, cloud storage (public/private),and brief introduction to parallel computing.

UNIT-IV

Relational databases: idea of a database and the need for it, relations, keys, primary key, foreign key; use SQL commands to create a table, foreign keys; insert/delete an entry, delete a table. SQL commands: select, project, and join; indexes. Basics of NoSQL databases: Mongo DB

Text Books:

1. Python Programming: A modular approach by Sheetal Taneja and Naveen Kumar Pearson

Reference Books:

1. Python Programming - Using Problem Solving Approach by Reema Thareja Oxford Publication.
2. Database Management System a Practical Approach by Rajiv Chopra by S. Chand

Note: Separate paper template will be provided to the paper setter for setting the question paper of end term semester examinations.

MC-901	ENVIRONMENTAL SCIENCES						
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	-	75	25	100	3 Hrs.
Purpose	To learn the multidisciplinary nature, scope and importance of Environmental sciences.						
Course Outcomes							
CO1	The students will be able to learn the importance of natural resources.						
CO2	To learn the theoretical and practical aspects of eco system.						
CO3	Will be able to learn the basic concepts of conservation of biodiversity.						
CO4	The students will be able to understand the basic concept of sustainable development.						

UNIT 1

The multidisciplinary nature of environmental studies. Definition, Scope and Importance. Need for public awareness. Natural Resources: Renewable and Non-Renewable Resources: Natural resources and associated problems.

- (a) Forest Resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.
- (b) Water Resources- Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
- (c) Mineral Resources- Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
- (d) Food Resources- World Food Problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
- (e) Energy Resources- Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies.
- (f) Land Resources- Land as a resource, land, degradation, man induced landslides, soil erosion and desertification.

Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyle.

UNIT II

Ecosystem-Concept of an ecosystem. Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow in the ecosystem. Ecological Succession. Food Chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystem-

- a. Forest Ecosystem
- b. Grassland Ecosystem
- c. Desert Ecosystem
- d. Aquatic Ecosystems(ponds, streams, lakes, rivers, oceans, estuaries)

Field Work. Visit to a local area to document Environment assets- river/forest/grassland/hill/mountain. Visit to a local polluted site- Urban /Rural Industrial/Agricultural. Study of common plants, insects and birds. Study of simple ecosystems-pond, river, hill, slopes etc. (Field work equal to 5 lecture hours).

UNIT III

Biodiversity and its conservation. Introduction, Definition: genetic, species and ecosystem diversity. Biogeographical classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity of global, National and local levels. India as a mega-diversity nation Hot spots of Biodiversity. Threats to biodiversity: Habitat loss, poaching of wild life, man-wildlife conflicts. Endangered and endemic species of India. Conservation of Biodiversity- In situ and Ex-Situ conservation of biodiversity.

Environmental Pollution Definition. Cause, effects and control measures of- (a) Air Pollution (b) Water Pollution (c) Soil Pollution (d) Marine Pollution (e) Noise Pollution (f) Thermal Pollution (g) Nuclear Hazards
Solid waste management- cause, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. Disaster management: floods, earthquake, cyclone and landslides

UNIT IV

Social Issues and the Environment. From unsustainable to sustainable development. Urban problems related to energy. Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people: Its problems and concerns. Case Studies. Environmental ethics-issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Wasteland Reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation. Public Awareness. Human population and the Environment. Population growth, variation among nations. Population explosion-Family Welfare Programme. Environment and human health. Human rights. Value Education. HIV/AIDS, Women and Child Welfare. Role of Information Technology in Environment and Human Health. Case Studies. Drugs and their effects; Useful and harmful drugs; Use and abuse of drugs; Stimulant and depressant drugs. Concept of drug de-addiction. Legal position on drugs and laws related to drugs.

Text Books

2. Environmental Science & Engineering Anandan, P. and Kumaravelan, R. 2009. Scitech Publications (India) Pvt. Ltd., India
3. Environmental Studies. Daniels Ranjit R. J. and Krishnaswamy. 2013. Wiley India.
4. Environmental Science- Botkin and Keller. 2012. Wiley , India

Note: The Examiner will be given the question paper template and will have to set the question paper according to the template provided along with the syllabus

Syllabus

B.Tech ECE IVth Semester

(Credit Based)

(2019-20)

Syllabus

B.Tech ECE IVth Semester

(Credit Based)

(2019-20)

BS-204		HIGHER ENGINEERING MATHEMATICS					
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 h
Purpose	The objective of this course is to familiarize the prospective Engineers with Laplace Transform, partial differential equations which allow deterministic mathematical formulations of phenomena in engineering processes and to study numerical methods for the approximation of their solution. More precisely, the objectives are as under:						
Course Outcomes							
CO 1	Introduction about the concept of Laplace transform and how it is useful in solving the definite integrals and initial value problems.						
CO 2	To introduce the Partial Differential Equations, its formation and solutions for multivariable differential equations originated from real world problems.						
CO 3	To introduce the tools of numerical methods in a comprehensive manner those are used in approximating the solutions of various engineering problems.						
CO 4	To familiar with essential tool of Numerical differentiation and Integration needed in approximate solutions for the ordinary differential equations.						

UNIT-1

Laplace Transform

Laplace Transform, Laplace Transform of Elementary Functions, Basic properties of Laplace Transform, Laplace transform of periodic functions, finding inverse Laplace transform by different methods, Convolution theorem, solving ODEs by Laplace Transform method.

UNIT-2

Partial Differential Equations

Formation of Partial Differential Equations, Solutions of first order linear and non-linear PDEs, Charpit's method, Solution to homogenous linear partial differential equations (with constant coefficients) by complimentary function and particular integral method.

UNIT-3

Numerical Methods-1

Solution of polynomial and transcendental equations: Bisection method, Newton-Raphson method and Regula-Falsi method, Finite differences, Relation between operators, Interpolation using Newton's forward and backward difference formulae. Interpolation with unequal intervals: Newton's divided difference and Lagrange's formulae.

UNIT-4

Numerical Methods-2

Numerical Differentiation using Newton's forward and backward difference formulae, Numerical integration: Trapezoidal rule and Simpson's 1/3rd and 3/8 rules, Ordinary differential equations: Taylor's series, Euler and modified Euler's methods. Runge-Kutta method of fourth order for solving first and second order equations.

HM- 903 Soft Skills & Interpersonal Communication							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
CO1	Develop basic understanding of Communication						
CO2	Understand the process of communication and speaking						
CO3	Develop the Personality concepts and its implementation						
CO4	Develop the basic of Group Discussion and interviews						

UNIT-I

Communication: Introduction Verbal, Non-Verbal, kinesics, proxemics, chronemics, Types of communication, extrapersonal communication, intrapersonal communication, intrapersonal communication, mass communication, Creativity in communication, Role of communication, flow of Communication and its need, Persuasive communication and negotiation; Time management in Persuasive communication, Importance of Persuasive Communication

UNIT-II

Barriers in the way of communication, noise, intrapersonal barriers, interpersonal barriers, organizational barriers, Extrapersonal barriers, Basics of communication: importance of communication, process of communication, objectives and characteristics of communication, Communication skills: Accent, Intonation, Phonetics, Speaking skills, Confidence, clarity, Fluency, Quality, pronunciation

UNIT-III

Personality Development; what is personality? Role of personality, Heredity, Environment, situation, Basics of personality, Soft skills; Needs and training, Activity in soft skills, Organizational skill; introduction and its need, basics principles for Organization skills, Stress management; Introduction, Stress at home and office, Stress prevention, analyze the model of stress.

UNIT-IV

Group discussion, form of Group discussion, strategy for Group discussion, discussing problems and solution, Oral presentation, introduction, planning, Occasion, Purpose, Modes of delivery, Resume making; Purpose of Resume, Resume design and structure, contents in Resume, types of resume, Job interview, introduction, objective of Interview, types of interview, stages of interview, Face to face interview and campus interview

Text Books:

1. Technical Communication Principles and Practice by Meenakshi Raman and Sangeeta Sharma by Oxford Publication

Reference Books:

1. Personality Development and soft skills by Barun K. Mitra, Oxford Publication
2. Communication Skills For Engineers by C. Muralikrishna and Sunita Mishra, Pearson Pub.

Note: Separate paper **template** will be provided to the paper setter for setting the question paper of end term semester examinations.

EC-202 Digital Communication							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
CO1	To learn digitization of analog signal by pulse modulation system and analyze their system performance						
CO2	To analyze different baseband transmission schemes and their performance						
CO3	To learn and understand different digital modulation schemes and compute the bit error performance						
CO4	To analyze different modulation tradeoffs and different equalization techniques.						

UNIT-I

Pulse modulation. Sampling process. Pulse Amplitude and Pulse code modulation (PCM), Differential pulse code modulation. Delta modulation, Noise considerations in PCM, Time Division multiplexing. Quantization noise in delta modulation, The O/P signal to quantization noise ratio in delta modulation, O/P signal to noise ratio in delta modulation, variants of DM.

UNIT-II

Base Band Pulse Transmission: Matched filter and its properties, average probability of symbol error in binary enclosed PCM receiver, Intersymbol interference, Nyquist criterion for distortionless base band binary transmission, ideal Nyquist channel raised cosine spectrum, correlative level coding Duo binary signalling, tapped delay line equalization, adaptive equalization, LMS algorithm, Eye pattern.

UNIT-III

Elements of Detection Theory, Optimum detection of signals in noise, Coherent communication with waveforms- Probability of Error evaluations.
Pass band Digital Modulation schemes- ASK, Phase Shift Keying, Frequency Shift Keying, Quadrature Amplitude Modulation, Continuous Phase Modulation and Minimum Shift Keying. Signal space diagram and spectra of the above systems, effect of intersymbol interference, bit symbol error probabilities, synchronization.

UNIT-IV

Digital Modulation tradeoffs. Optimum demodulation of digital signals over band-limited channels- Maximum likelihood sequence detection (Viterbi receiver). Equalization Techniques. Synchronization and Carrier Recovery for Digital modulation.

Text Books:

2. Proakis J. G. and Salehi M., "Communication Systems Engineering", Pearson Education, 2002.
3. Taub H. and Schilling D.L., "Principles of Communication Systems", Tata McGraw Hill, 2001.

Reference Books:

1. Proakis J.G., "Digital Communications", 4th Edition, McGraw Hill, 2000.
2. Lathi B.P., "Modern Digital and Analog Communication", 4th edition, Oxford university Press, 2010

EC-204L	COMMUNICATION LAB						
Lecture	Tutorial	Practical	Credit	Practical	Minor Test	Total	Time
-	-	2	1	60	40	100	2 Hrs.
Course Outcomes (CO)							
Upon completion of the course, students will be able to							
CO1	Generate and analyze Analog Modulated and demodulated Signals.						
CO2	Test & observe the outputs of different types of analog detectors.						
CO3	Generate and analyze digital Modulated and demodulated Signals.						
CO4	Test & observe the outputs of different types of digital detectors.						

List of experiments:

- 1: To study and Perform Amplitude Modulation & Demodulation.
- 2: To study and Perform Frequency Modulation and Demodulation.
- 3: To study and Perform Pulse Amplitude Modulation and Demodulation.
- 4: To study and Perform Pulse Width Modulation and Demodulation.
- 5: To study and Perform Pulse Position Modulation and Demodulation.
- 6: To study and Perform Pulse Code Modulation and Demodulation.
- 7: To study and Perform Time Division Multiplexing (TDM) system.
- 8: To study and Perform Amplitude Shift Keying (ASK) Modulation and De- Modulation.
- 9: To study and Perform Frequency Shift Keying (FSK) Modulation and De-Modulation.
- 10: To study and Perform Phase Shift Keying (PSK) Modulation and De-Modulation.
- 11: To study and Perform Quadrature Phase Shift Keying (QPSK) Modulation and De-Modulation.
- 12: To study and perform Adaptive Delta Modulation and demodulation.
13. To study Base Band Transmission and calculate bit error rate.

Note: At least ten (10) experiments from the above list are mandatory to perform for the students.

Reference Books:

1. Taub & Schilling, Principles of Communication Systems, McGraw Hill Publications, (1998) 2nd ed.
2. Simon Haykin, Communication Systems, John Wiley Publication, 3rd ed.
3. Sklar, Digital Communications, Prentice Hall-PTR, (2001) 2nd ed.
4. Lathi B. P., Modern Analog and Digital Communication, , Oxford University Press, (1998) 3rd

EC-206		Analog Circuits					
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
CO1	To make the students understand the analysis of various BJT and FET amplifiers using small signal models.						
CO2	To teach the students the concept of describe the frequency response of multistage amplifiers and the detailed concept of feedback topologies.						
CO3	To make the students learn various oscillator circuits using both Op-Amp and BJT.						
CO4	To teach the students the various application circuits of Op-Amp and designing for a given specification.						

UNIT-I

Amplifier Models: Amplifier types: Voltage amplifier, current amplifier, trans-conductance amplifier and trans-resistance amplifier, comparison based on input impedance and output impedance. Small signal analysis of BJT amplifiers: CE, CB and CC amplifiers using r_e model, small signal analysis of the CS JFET amplifiers, estimation of voltage gain, input resistance, output resistance etc, design procedure for particular specifications of amplifiers.

UNIT-II

Transistor Frequency Response: Class A, class B, class C amplifiers: calculation of maximum efficiency. Frequency response of the amplifiers: low frequency, mid-frequency and high frequency region. Effect of cascading of amplifiers on the frequency response, cut-off frequencies, Bandwidth and voltage gain. Miller effect, Feedback in amplifiers: Voltage series, current series, voltage shunt, current shunt, effect of feedback on gain, bandwidth, input impedance, output impedance.

UNIT-III

Oscillators: Barkhausen criterion for oscillators, types of Oscillators: RC phase shift oscillator, Wien bridge oscillator, LC oscillators : Hartley oscillator, Collpit oscillator, derivation of frequency of oscillation for BJT and Op-amp configurations, 555 timer: operation as astable and monostable multivibrator.

UNIT-IV

Op-Amp Applications: Simple op-amp circuits: adder, subtractor, Schmitt trigger, Differential amplifier: calculation of differential gain, common mode gain, CMRR, OP-AMP design: design of differential amplifier for a given specification, design of gain stages and output stages.

Text Books:

1. Millman & Halkias: Integrated Electronics, TMH.
2. Boylestad & Nashelsky: Electronic Devices & Circuit Theory, PHI.

Reference Books:

1. B.G. Streetman, Solid State Electronic Devices, Prentice Hall of India, New Delhi, 1995.
2. E S. Yang, Microelectronic Devices, McGraw Hill, Singapore, 1988.
3. A.S. Sedra and K.C. Smith, Microelectronic Circuits, Saunder's College Publishing, 1991.
4. S Salivahanan and N Naresh Kumar, Electronics devices and circuits, McGraw Hill, 1998.

Note: Separate paper template will be provided to the paper setter for setting the question paper of end term semester examinations.

EC-208L		Analog Circuits Lab					
Lecture	Tutorial	Practical	Credit	Practical	Minor Test	Total	Time
-	-	2	1	60	40	100	3 Hrs.
Course Outcomes (CO)							
CO1	To design and calculate the gain , frequency response etc. of the various configuration of transistor amplifier.						
CO2	To make students Design various RC oscillators using Op-Amp 741 for a given frequency of oscillation.						
CO3	To make students Design various RC oscillators using BJT for a given frequency of oscillation.						
CO4	To teach the students the design of various Op-Amp circuits such as adder, subtractor etc.						

List of experiments:

1. To design a simple common emitter (CE) amplifier circuit using BJT and find its gain and frequency response. To design a differential amplifier using BJT and calculate its gain and frequency response.
2. To design a BJT emitter follower and determine its gain, input and output impedances.
3. To design and test the performance of Phase shift Oscillator using Op-Amp 741.
4. To design and test the performance of Wien bridge oscillator using Op-Amp 741.
5. To design and test the performance of BJT - RC Phase shift Oscillator for $f_0 \leq 10$ KHz.
6. To design and test the performance of BJT – Hartley Oscillators for RF range $f_0 \geq 100$ KHz.
7. To design and test the performance of BJT – Colpitt Oscillators for RF range $f_0 \geq 100$ KHz.
8. To design an astable multivibrator using 555 timer.
9. To design a monostable multivibrator using 555 timer.
10. To design Schmitt trigger using Op-amp and verify its operational characteristics.
11. To design an adder circuit using Op-Amp to add three dc voltages.
12. To design a subtractor using Op-Amp to subtract DC voltages v_1 and v_2 .

Reference Books:

1. Millman & Halkias: Integrated Electronics, TMH.
2. Boylestad & Nashelsky: Electronic Devices & Circuit Theory, PHI.
3. S Salivahanan and N Naresh Kumar, Electronics devices and circuits, McGraw Hill, 1998.

Note: Atleast ten (10) experiments from the above list are mandatory to perform for the students.

EC-210 MICROPROCESSORS AND MICROCONTROLLER							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
CO1	Acquired knowledge about the architecture of Microprocessors and Microcontrollers.						
CO2	Acquired knowledge about instruction set and programming concept of Microprocessors and Microcontrollers in assembly and C language.						
CO3	To understand peripheral interfacing with Microprocessors and Microcontrollers.						
CO4	To design the systems /models based on Microprocessors and Microcontrollers						

UNIT-I

Evolution of Microprocessor, Introduction to 8-bit Microprocessor 8085 architecture, Pin Details 8085 Microprocessor, 8086 Architecture description of data registers, address registers; pointer and index registers, PSW, Queue, BIU and EU, 8086 Pin diagram descriptions. Generating 8086 CLK and reset signals using 8284. WAIT state generation. Microprocessor BUS types and buffering techniques, 8086 minimum mode and maximum mode CPU module, 8086 CPU Read/Write timing diagrams in minimum mode and maximum mode.

UNIT-II

8051 Architecture, On-chip memory organization – general purpose registers, SFR registers, Internal RAM and ROM, Oscillator and Clock circuits. Pin Diagram of 8051, I/O Pins, Port, Connecting external memory, Counters and Timers, Purpose of TCON & TMOD registers, Serial data transmission/reception and transmission modes, Purpose of SCON & PCON registers, Different Types of Interrupts, Purpose of Time Delays, 8051 addressing modes.

UNIT-III

8086 Instruction format, addressing modes, Data transfer instructions, string instructions, logical instructions, arithmetic instructions, transfer of control instructions; process control instructions. 8051 Data transfer instructions, arithmetic and logical instructions, Jump and Call instructions, I/O port, Timer and Counter programming, Serial port and Interrupt programming, Assembly language programs.

UNIT-IV

Memory devices, Address decoding techniques, Interfacing SRAMS; ROMS/PROMS, 8086 Interrupt mechanism; interrupt types and interrupt vector table. Intel's 8255 - description and interfacing with 8086, ADCs and DACs, - types operation and interfacing with 8086.

Interfacing of Matrix Keyboards, ADC, DAC, Temperature Sensor, Stepper Motor with 8051.

Text Books:

1. D.V. Hall, Microprocessors and Interfacing, McGraw Hill 2nd ed.
2. Kenneth Ayala, "The 8051 Microcontroller" 3rd ed. CENGAGE Learning.

EC-212L		MICROPROCESSORS AND MICROCONTROLLER LAB					
Lecture	Tutorial	Practical	Credit	Practical	Minor Test	Total	Time
-	-	2	1	60	40	100	3 Hrs.
Course Outcomes (CO)							
CO1	To familiarization with 8085, 8086 Microprocessors and 8051 Microcontrollers.						
CO2	Ability to write an assembly language program for 8086 Microprocessors as well as C language program for 8051 Microcontroller.						
CO3	Ability to interfacing the various Peripheral to 8086 Microprocessors and 8051 Microcontrollers.						
CO4	Ability to design the systems based on 8051 Microcontrollers.						

List of experiments to be performed using 8086 and 8051 Microcontrollers

For 8086 Microprocessor write an Assembly Language Program to

- 1 Add / Sub two 16 bit numbers.
- 2 Multiply two 16 bit unsigned/ signed numbers.
- 3 Divide two unsigned/ signed numbers (32/16 , 16/8, 16/16, 8/8)
- 4 Find smallest/ largest number from array of n numbers.
- 5 Arrange numbers in array in ascending/ descending order.
- 6 Convert Hex to Decimal, Decimal to Hex.
- 7 Compare two strings using string instructions / without using string instructions.
- 8 Display string in reverse order, string length, Concatenation of two strings.
- 9 To find 1's and 2's complement of a number.
- 10 To find the Fibonacci Series.
- 11 To find Log of a given number using look up table.
- 12 To find Factorial of a number.
- 13 To write an ALP using 8051 Microcontrollers to perform addition, subtraction, multiplication and division of two eight bit numbers.
- 14 To write an ALP using 8051 Microcontrollers to perform logical operation i.e., AND, OR, XOR and Complement of two eight bit numbers.
- 15 To write an ALP using 8051 Microcontrollers to perform multi byte addition and subtraction of unsigned number.
- 16 To write an embedded C program using 8051 Microcontrollers for interfacing LCD to display message "LCD Display" on LCD screen.
- 17 To write an embedded C program using 8051 Microcontrollers for interfacing keypad to port P0 .Whenever a key is pressed; it should be displayed on LCD.
- 18 To write an embedded C program using 8051 Microcontrollers for interfacing a switch and a buzzer to two different pins of a Port such that the buzzer should sound as long as the switch is pressed.
- 19 To write an embedded C program using 8051 Microcontrollers for interfacing stepper motor to rotate clockwise and anticlockwise directions.
- 20 To write an embedded C program using 8051 Microcontrollers for interfacing relay and buzzer.

Reference Books:

1. Kenneth Ayala," The 8051 Microcontroller" 3rd ed. CENGAGE Learning.
2. M.A. Mazidi, J.G. Mazidi, R. D. McKinlay," The 8051 Microcontroller and Embedded systems using assembly and C" -2nd Ed, Pearson Education.

Note: Atleast ten (10) experiments from the above list are mandatory to perform for the students.

ES -202							
BASICS OF ANALOG COMMUNICATION							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
Upon completion of the course, students will be able to							
CO1	Describe different types of noise and predict its effect on various analog communication systems.						
CO2	Understand and analyze various Amplitude modulation and demodulation methods.						
CO3	Understand and analyze Angle modulation and demodulation methods.						
CO4	Understand the concepts of Transmitters and Receivers and their circuits.						

Unit-I

Communication system and Noise: Constituents of communication system, Modulation, Bandwidth requirement, Noise, Classification of noise, Resistor noise, Multiple resistor noise sources, Noise Temperature, Noise bandwidth, Noise figure, its calculation and measurement, Bandpass noise representation, Noise calculation in Communication Systems: Noise in Amplitude Modulated System, Noise in angle modulated systems.

Analog Modulation Techniques: Theory of amplitude modulation, AM power calculations, AM modulation with a complex wave, Concepts of angle modulation, Theory of frequency modulation, Mathematical analysis of FM, Spectra of FM signals, Narrow band FM, Wide band FM, Phase modulation, Phase modulation obtained from frequency modulation, Comparison of AM, FM & PM.

Unit-II

AM Transmission: Generation of Amplitude Modulation, Low level and high level modulation, Basic principle of AM generation, Square law modulation, Vander bijl modulation, Suppressed carrier AM generation (Balanced Modulator) ring Modulator.

AM Reception: Tuned Ratio Frequency (TRF) Receiver, Super heterodyne Receiver, RF Amplifier, Image Frequency Rejection, Cascade RF Amplifier, Frequency Conversion and Mixers, Tracking & Alignment, IF Amplifier, AM detectors, Distortion in diode detectors, AM receiver characteristics.

Unit-III

FM Transmission: FM allocation standards, Generation of FM by direct method, Varactor diode Modulator, Indirect generation of FM, The Armstrong method RC phase shift method, Frequency stabilized reactance FM transmitter, FM stereo transmitter, Noise triangle.

FM Reception: Direct methods of Frequency demodulation, Frequency discrimination (Balanced slope detector), Foster seelay of phase discriminator, Ratio detector, Indirect method of FM demodulation, FM detector using PLL, Pre-emphasis / de-emphasis, FM receiver, FM stereo receiver.

Unit-IV

SSB Transmission: Introduction, Advantages of SSB Transmission, Generation of SSB, The Filter method The Phase Shift Method, The Third Method, Pilot Carrier SSB, Vestigial Side-band Modulation (VSB), VSB-SC, Application of AM and FM in TV transmission.

SSB Reception: SSB Product Demodulator, Balanced Modulator as SSB Demodulator, Pilot Carrier SSB Receiver, Modern Communication Receiver.

Analog Pulse Modulation: Introduction, Pulse amplitude modulation (PAM), PAM Modulator Circuit, Demodulation of PAM Signals, Pulse Time Modulation (PTM): Pulse Width Modulation (PWM), Pulse Position Modulation (PPM), PWM and PPM Demodulator,

MC-902	Constitution of India					
Lecture	Tutorial	Practical	Major Test	Minor Test	Total	Time
3	-	-	75	25	100	3 Hrs.
Purpose	To know the basic features of Constitution of India					
Course Outcomes						
CO1	The students will be able to know about salient features of the Constitution of India.					
CO2	To know about fundamental duties and federal structure of Constitution of India.					
CO3	To know about emergency provisions in Constitution of India.					
CO4	To know about fundamental rights under constitution of India.					

UNIT-I

1. Meaning of the constitution law and constitutionalism, Historical perspective of the Constitution of India. Salient features and characteristics of the Constitution of India.
2. Scheme of the fundamental rights

UNIT - II

3. The scheme of the Fundamental Duties and its legal status. The Directive Principles of State Policy – Its importance and implementation. Federal structure and distribution of legislative and financial powers between the Union and the States.
4. Parliamentary Form of Government in India – The constitution powers and status of the President of India

UNIT - III

5. Amendment of the Constitutional Powers and Procedure. The historical perspectives of the constitutional amendments in India.
6. Emergency Provisions: National Emergency, President Rule, Financial Emergency. Local Self Government – Constitutional Scheme in India.

UNIT-IV

7. Scheme of the Fundamental Right to Equality. Scheme of the Fundamental Right to certain Freedom under Article 19.
8. Scope of the Right to Life and Personal Liberty under Article 21.

Text Books

1. Constitution of India. Prof.Narender Kumar (2008) 8th edition. Allahabad Law Agency.

Reference Books:

EC-301 Electromagnetic Waves							Lecture	3
	Tutorial	Practical	Credit	Major Test	Minor Test	Total	3 Hrs.	
Purpose	0	0	3	75	25	100		
CO1	Students will be able to understand and apply the basic laws of Electrostatics for the generation and propagation of electric field in different media.							
CO2	Students will be able to understand and apply the basic laws of Magnetostatics for the generation and propagation of magnetic field in different media.							
CO3	Students will be able to understand and develop the relations between Electric field and Magnetic field.							
CO4	Students will be able to understand and analyze the propagation of wave in different media.							

Unit-I

Electrostatics: Review of coordinate system and vectors: Cartesian, Cylindrical and Spherical coordinate systems. Review of vectors: Gradient, curl, and Divergence of vector. Review of integral calculus: Line integral, Surface integral and Volume integral. Coulomb's law. Electric Field Intensity, Electric Potential, Field of a Line Charge, Field of a Sheet of Charge, Electric Flux, Electric Flux Density, Gauss's Law and its applications, Boundary conditions for Electric Field. Method of Images, Poissons's and Laplace's Equations, Uniqueness Theorem.

Unit-II

Magnetostatics: Differential Current Element, Biot - Savart Law. Magnetic field of a linear conductor of infinite length. Magnetic field of a circular current carrying loop. Magnetic Vector potentials, Magnetic Circuit, Force on a moving charge in magnetic field, Force on a Current Carrying Conductor in Magnetic Field, Torque on a closed current carrying loop in magnetic field. Magnetic flux and Magnetic flux density. Ampere's Circuit law, Faraday's Law, Boundary Conditions for Magnetic field, Maxwell's Equations for Free space, Good Conductors & Lossy Dielectric for Static & Sinusoidal Time Variations Fields, Retarded potentials.

Unit-III

Uniform Plane Wave: Plane Waves & its properties, Uniform Plane waves, Wave Equation for Free Space and Conducting Medium, Propagation of Plane Waves in Lossy Dielectrics, Good Dielectrics & Good Conductors. Skin effect and Skin depth for different medium. The Poynting's Vector and Poynting theorem.

Unit-IV

Transmission Lines and Waveguides: Representation of transmission line. Reflection in Transmission Line. The Transmission Line Equations, Graphical methods for solving transmission line. Rectangular Waveguides: TE, TM, TEM waves in rectangular wave guide, Calculation of field in rectangular waveguide for TE and TM mode. Cut-off & Guided frequency of waveguide.

 2. J.F. Heys, "Computer Organization and Architecture", TMH.

System Organization: Pipeline and Vector Processing; Parallel processing, pipelining, arithmetic pipeline, instruction pipeline, RISC pipeline, vector processing, array processors, Input-output Organization: Peripheral devices, input-output interface, asynchronous data transfer, modes of transfer, priority interrupt, DMA,

UNIT-IV

Memory Organization: Memory hierarchy, device characteristics, auxiliary memory, associative memory, cache memory, virtual memory, memory management, hardware multiprocessor architectures and their characteristics, interconnection structures, Random access memories: semiconductor RAMS, Serial-access Memories – Memory organization, Main Memory Allocation.

UNIT-III

Processor Design: Decimal arithmetic unit –BCD adder, BCD subtraction, decimal arithmetic operations, Forms of Parallel processing classification of Parallel structures, Array Processors, Structure of general purpose Multiprocessors.
Control Design: Micro programmed control, control memory, address sequencing, micro program example, design of control unit, Hardwired Control: design methods, Multiplier Control Unit, CPU Control unit.

UNIT-II

Control Design: Micro programmed control, control memory, address sequencing, micro program example, design of control unit, Hardwired Control: design methods, Multiplier Control Unit, CPU Control unit.
Processor Design: Decimal arithmetic unit –BCD adder, BCD subtraction, decimal arithmetic operations, Forms of Parallel processing classification of Parallel structures, Array Processors, Structure of general purpose Multiprocessors.

UNIT-I

Basic Structure of Computer Hardware and Software: Introduction to basic computer architecture, register transfer, bus and memory transfers, arithmetic, logic and shift micro operations. Central Processing Unit: Introduction, general register organization, stack organization, instruction formats, addressing modes, data transfer and manipulation, program control, RISC, Macros and Subroutines.

Course Outcomes								
At the end of this course students will demonstrate the ability to								
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Major Test	Minor Test	Practical	Total	Time
3	-	-	3	75	25	-	100	3 Hrs.
CO1 To understand the concept of basics of computer hardware & software								
CO2 To understand the concept of control design & processor design								
CO3 To familiarize with the concept of various memory systems.								
CO4 To familiarize with the concept of system organisation.

 2. M. Mansurpur, Introduction to Information Theory, McGraw Hill, 1987.
 3. R. B. Ash, Information Theory, Prentice Hall, 1970.
 4. Shu Lin and D. J. Costello Jr., Error Control Coding, Prentice Hall, 1983.

Text/Reference Books:

Channel Coding: Shannon second theorem for Noisy channels, Introduction to error control coding, Types of codes, Maximum Likelihood decoding, Linear block codes, Error detecting and correcting capabilities of a block code, Hamming code, cyclic code, convolutional arithmetic codes.

UNIT - IV

Coding information sources: The average length of a code, Shannon's First Theorem, Finding binary compact codes- Huffman codes, Code efficiency and redundancy; Channels and mutual information: Information channels, Binary symmetric channels, Probability relations in a channel, A priori and A posteriori entropies, Mutual information, properties of mutual information, types of channels: Noiseless, deterministic, Cascaded channels, Channel capacity.

UNIT - III

Properties of codes: Introduction, types of codes: uniquely decodable codes, instantaneous codes; construction of an instantaneous code, Kraft inequality: statement and discussion and Proof, Markov sources; Shannon's noisy coding theorem and converse for discrete channels; Calculation of channel capacity and bounds for discrete channels; Application to continuous channels.

UNIT-II

Probability, random variables, Probability distribution functions and probability density functions, Expectation, moments, Random Processes, mean and Auto Correlation, Stationary and ergodicity, Information theory : the definition of information, the zero-memory information source, entropy for discrete ensembles; properties of entropy, Shannon's noiseless coding theorem; Encoding of discrete sources,

 6. D. J. DeFatta, J. G. Lucas and W. S. Hodgkiss, "Digital Signal Processing", John Wiley & Sons, 1988.

Design of IIR Filters: Design of IIR filters from analog filters, Design by approximation of derivatives, Impulse Invariance Method, Bilinear Transformation Method, Least Square Methods. Characteristics of Butterworth, Chebyshev and Elliptical analog filters, Frequency transformations, design of IIR filters in frequency domain.

Unit-IV

Design of FIR Filters: Characteristics of practical frequency selective filters, types of FIR filters, filter design specifications such as peak pass band ripple, minimum stop band attenuation etc., alternation theorem. Design of FIR filters using windowing method, frequency sampling method and Park-McClellan's method. Design of optimum equiripple FIR filters. Comparison of design methods for FIR filters. Effect of finite register length in FIR filter design.

Unit-III

Frequency Domain Sampling and DFT: DFT, properties, Linear filtering using DFT, Frequency analysis of signals using DFT, radix 2 and radix-4 FFT, computation of DFT of real sequences. **Implementation Structures of Discrete Time Systems:** Direct form, cascade form, frequency sampling and lattice structures for FIR systems. Direct forms, transposed form, cascade form parallel form. Lattice and lattice ladder structures for IIR systems.

Unit-II

Discrete Transforms: Z- transform and its properties, Inversion of Z-transform, One sided Z- transform and solution of differential equations. Analysis of LTI systems in Z-domain, causality, stability, schur-cohn stability test, relationship between Z-transform and Fourier transform. **Frequency Selective Filters:** All pass filters, minimum-phase, maximum-phase and mixed-phase systems, Goertzel algorithm, Chirp Z-transform, applications of Z-Transform.

Unit-I

Course Outcomes							
At the end of this course students will demonstrate the ability to							
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Major Test	Minor Test	Practical	Total
3	-	-	3	75	25	-	100
3							3
CO1	Obtain Z-transform of discrete time signals						
CO2	Obtain DFT and FFT of discrete time signals						
CO3	Implement structures for different discrete time systems						
CO4	Design of FIR and IIR digital filters for various applications						

Digital Signal Processing

Probability Theory & Stochastic Processes						
ECP-1	Lecture	Tutorial	Practical	Credit	Major Test	Minor Test
3	-	-	3	75	25	100
	3Hr					
	Total					
	Time					
Purpose						
To familiarize the students with the basics of Probability Theory & Stochastic Processes						
Course Outcomes						
CO1	Develop an understanding to the basic concepts of Sets, Probabilities & Random Variables.					
CO 2	To understand various distribution functions & bounds.					
CO 3	To analyze and appreciate various Random Sequences and theorems.					
CO 4	To apply various Random Processes & Power Spectral Density to real life problems.					

Unit-I

Sets and set operations; Probability space; Conditional probability and Bayes theorem; Combinatorial probability and sampling models. Discrete random variables, probability mass function, probability distribution function, example random variables; Continuous random variables, probability density function, probability distribution function, example distributions

Unit-II

Joint distributions, functions of one and two random variables, moments of random variables; Conditional distribution, densities and moments; Characteristic functions of a random variable; Markov, Chebyshev and Chernoff bounds

Unit-III

Random sequences and modes of convergence (everywhere, almost everywhere, probability, distribution and mean square); Limit theorems; Strong and weak laws of large numbers, central limit theorem.

Unit-IV

Random process. Stationary processes. Mean and covariance functions. Ergodicity, Transmission of random process through LTI. Power spectral density.

AC Voltage Controllers: Types of AC voltage controllers: symmetrical and asymmetrical controllers, Principle of phase control, ON-OFF control, Single phase ac voltage controller with R load, Cycloconverters: Principle of cycloconverter operation, step up and step down cycloconverters, Output voltage equation for a cycloconverter, Applications: Switching Power Supplies, SMPS, UPS.

UNIT-IV

Choppers: Quadrant operations of Type A, Type B, Type C, Type D and type E choppers, Control strategies for choppers, Detailed analysis of Type A chopper. Step up chopper. Inverters: Types of inverters, operating principle, Single phase half bridge inverter, Single phase full bridge inverter.

UNIT-III

Rectifiers types: Controlled and Uncontrolled Rectifiers: Single phase: Study of semi and full bridge converters for R, RL, RLE loads. Analysis of load voltage, load current and derivation of load form factor and ripple factor, Effect of source impedance on the performance of the controlled rectifiers, Analysis of three phase half wave controlled rectifiers with R load, Analysis of three phase half wave controlled rectifiers with R load.

UNIT-II

Characteristics of Semiconductor Power Devices: Thyristor, power MOSFET and IGBT : structure, Thyristor Triggering circuit, Thyristor commutation circuit, Uses and design of snubber circuits for Thyristor, power MOSFETs and IGBT. Fast recovery diodes and schottky diodes.

UNIT-I

Acquire knowledge about Build and test circuits using power devices such as SCR
 Ability to analyze Analyze and design controlled rectifier, DC to DC converters, DC to AC inverters
 Foster ability to Learn how to analyze these inverters and some basic applications
 To develop skills to build, and Design SMPS.

4. Sedra & Smith, Microelectronic Circuits 2004, Oxford, 5th edition
5. J.D. Plummer, Silicon VLSI Technology: Fundamentals, Practice, and Modeling, Pearson.

consideration, VLSI assembly technologies. Yield and reliability in VLSI.
 steps: PMOS, NMOS and CMOS IC technology, Packaging : Package types, packaging design
 Metallization: Applications and choices, physical vapor deposition, patterning, VLSI process fabrication

UNIT-IV

Lithography: Optical and non-optical lithography, electron, X-ray and ion-beam lithography, contact/proximity and projection printers, alignment, Photoresist and Etching: Types of photoresists, polymer and materials, Etching- Dry & Wet etching, basic regimes of plasma etching, reactive ion etching and its damages, lift-off, and sputter etching.

UNIT-III

Epitaxial process: Epitaxy and its concept, Growth kinetics of epitaxial growth, Low temperature epitaxy, growth chemistry of Si epitaxial layer, apparatus for epitaxial layer, MBE system Diffusion process: Diffusion models of solid, Fick's theory of diffusion, Solution of Fick's law, diffusion parameters measurements, Ion implantation: Scattering phenomenon, range theory, channeling, implantation damage, ion implantation systems, Annealing.

UNIT -II

Crystal growth: monolithic and hybrid ICs, crystal growth, Czochralski technique of crystal growth, wafer preparation and specifications, defects, measurements of parameters of crystals, Fabrication steps, Oxidation: Theory of growth of Silicon dioxide layer, oxidation kinetics, Dry, wet and high pressure oxidation, plasma oxidation, properties of oxidation, defects induced due to oxidation.

UNIT-I

CO1	Students will be able estimate oxide thickness, growth rate, etch rate, deposition rate, and perform pattern etching etc. using knowledge of mathematics, science, engineering and practices.
CO2	Students can design and conduct experiments such as oxidation, metallization and analyze growth / deposition rate, thickness etc.
CO3	Shall be able to understand system, design such as CVD reactor, PVD chamber etc.
CO4	Understanding of fabrication sequence of CMOS and NMOS , PMOS Integrated circuits.

Course Outcomes

Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Major Test	Minor Test	Total	Time	Credit
VLSI Technology							

Computer Networks							
EC01							
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Major Test	Minor Test	Practical	Total
3	-	-	3	75	25	-	100
To familiarize the students with the concepts of basic computer networks used in communication. Also familiarize the students with the various layers of OSI and TCP/IP model.							
Course Outcomes							
CO1	To understand the concept of basics of computer networks and physical layer & media.						
CO2	To understand the concept and processes of data link layer and medium access sublayer.						
CO3	To familiarize with the concept and design issues of network, transport & session layer and presentation layer.						
CO4	To familiarize with the concept and protocols of application layer.						

Unit - I

Introduction: Introduction to Computer Networks, Protocols and standards, Network Models: The OSI Model, TCP/IP protocol suite, Introduction to addressing.
Physical Layer and Media: Guided & Unguided media, Circuit Switching and Packet Switching. The Telephone System, ATM.

Unit - II

The Data Link Layer: Data Link Layer Design issues, Data link control: Framing, Flow & Error control, Noiseless channels, Noisy channels, HDLC, Point to Point protocols.
The Medium Access Sub layer: Aloha Protocols, LAN Protocols: wired LAN's, Wireless LAN.

Unit - III

Network Layer: Forwarding, Flow Control, Error Control, Multicast routing, IPv4 addresses, IPv6 addresses, internetworking, SNMP, ARP
Transport & Session Layer, Presentation Layer: Flow Control and Congestion Control at the Transport Layer, Transmission Control Protocol – Basic Features, TCP Congestion Control, cryptography

Unit-IV

Application Layer: Design issues, file transfer, access and management, electronic mail, WWW & HTTP

Text Books:

1. Forouzan B.A, Data Communications and Networking, Tata-Mc-Graw Hill.
2. Tanenbaum A.S, Computer Networks, PHI.

Reference Books:

1. Stallings W, Data and Computer Communications, PHI.
2. Leon –Garcia, Computer Networks, Mc Graw Hill

MECHATRONICS							
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Major Test	Minor Test	Total	Time(Hrs)
3	-	-	3	75	25	100	3
Course Outcomes The Objective of this course is to make the students aware about Mechanical and Electronic Instruments together for different applications. This course will help students to build the fundamental concepts of inter disciplinary problems. At the end of this course the student should be able							
CO1	To understand Mechatronics System and its applications.						
CO2	To understand the operations of different Sensors and Transducers and their applications.						
CO3	To understand the Electrical and Mechanical Actuation Systems operations and their uses.						
CO4	To understand the basic structure of PLC and its applications and designing examples of Mechatronics Systems.						

UNIT-I

INTRODUCTION TO MECHATRONICS: Definition, Evolution, Scope, Mechatronics Design Elements, Examples, and Applications; Measurement Systems; Control Systems: Open and Close Loop Systems, Block Diagram of Feedback Control System.

UNIT-II

TRANSDUCERS AND SENSORS: Transduction Principle, Classification of Transducers, Selection Parameters, Resistive, Inductive, Capacitive, Piezoelectric, Photoelectric, Measurement of Flow and Level; Sensors: LVDT, LMDT, Proximity, Force, Pressure, Pneumatic, Light, Touch and Tactile, Ultrasonic and Voice Recognition etc.

UNIT-III

ACTUATORS: Actuator Types and Application Areas, Electromechanical Actuators, Electrical Actuators: Servo and Stepper Motors; Pneumatic and Hydraulic Actuators, Piezoelectric Actuators, Magnetostrictive actuators, Memory-metal Actuators, Ion-exchange Polymer-metal Composite; Mechanical Actuators: Mechanism, Kinematics Chains, Bearings, Belt Drives, Chains and Chain Drives, Pulleys, Cams and Gears.

UNIT-IV

PLC AND MECHATRONIC SYSTEM DESIGN: Microprocessors, Microcontrollers; PLC: Introduction, Basic Structure, Input/Output Processing, Programming, Timers, Internal Relays and Counters, Data Handling, Analog Input/Output, Selection of a PLC, Advantages and Uses; Design of Mechatronic Systems: Mechatronics design elements, Embedded system, MEMS, Robotics; Description of Designing a Mechatronic System: Automatic Camera, Washing Machine and List of some other Mechatronic Systems.

Text Books:

1. R. K. Rajput, "A Textbook of Mechatronics", S. Chand & Company Pvt. Ltd, 2015.
2. Nitigour Premchand Mahalik, "Mechatronics Principles, Concepts and Applications", Tata McGraw-Hill publishing company Ltd, 2003.
3. M.D.Singh & J.G. Joshi, "Mechatronics", PHI Learning Private Limited, 2015.

Reference Books:

1. Devdas Shetye & Richard A.Kolk, "Mechatronics System Design", PWS Publishing Company (Thomson Learning Inc.).
2. William Bolton, "Mechatronics Control systems in Mechanical and Electrical Engineering", Prentice Hall.

1. Electronics Instrumentation and Measurement Techniques: Cooper W.D & Helfrick A.D.; PHI Doebelin E.O., Measurement Systems: Application & Design, Mc Graw Hill.

Reference Books:

1. A Course in Electrical and Electronics Measurements and Instrumentation: A.K. Sawhney; Dhanpat Rai & Sons.

Text Book:

Multiplexing, Spatial Encoders, Telemetry.

Data Acquisition Systems: A to D and D to A converters, Analog and Digital Data Acquisition Systems,

Transducers: Classification of Transducers, Strain Gauge, Displacement Transducers - Capacitive Transducers, LVDT, Piezo-electric Transducers, Temperature Transducers - resistance thermometer, Thermocouples and Thermistors, Liquid level measurement Low pressure (vacuum) measurement.

Unit-IV

Digital Instruments: Digital Indicating Instruments, Comparison with analog type, digital display methods, digital methods of time and frequency measurements, digital voltmeters.

Electronic Instruments: Wave analyzer, Distortion meter: Q-meter. Measurement of Op-Amp parameters.

Unit-III

Voltage Indicating and Recording Devices: Analog voltmeters and Potentiometers, Self balancing potentiometer and X-Y recorders, Galvanometers - Oscillographs, Cathode - Ray Oscilloscopes, Magnetic Tape Recorders.

Bridges: Maxwell Inductance bridge, Maxwell's Inductance Capacitance Bridge, Anderson's Bridge, Hay's Bridge, De-Sauty's Bridge, Schering's bridge and Wein's bridge.

Unit-II

Measurement of Resistance: Wheat stone bridge, Carey-Foster Bridge, Kelvin double bridge, Measurement of Insulation resistance.

Measurement and Error: Functional elements and generalized configuration of a measuring Instrument, Characteristics of instruments, errors in measurements and their statistical analysis.

Unit-I

Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time	Course Outcomes				
								CO1	CO2	CO3		
3	0	0	3	75	25	100	3 Hr.	Students will learn the techniques of measurement of resistance using different bridges	AC Bridges & Voltage Indicating & Recording Devices will be introduced to the students	Students will be able to recognize the functioning of different Analog & Digital Instruments	CO4	Transducers & Data Acquisition Systems will be introduced to the students
Purpose									To familiarize the students with the concepts of Electronics Measurements like measurement of voltage, current & resistance etc.			

Electronic Measurement and Instruments

Renewable Energy Resources							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hour
Course Outcomes							
CO 1	To understand the energy demand of world, nation and available resources to fulfill the demand						
CO 2	To know about the conventional energy resources and their effective utilization						
CO 3	To acquire the knowledge of modern energy conversion technologies						
CO 4	To be able to understand and perform the various characterization techniques of fuels						
CO5	To be able to identify available nonconventional (renewable) energy resources and techniques to utilize them effectively.						

Unit-I

Introduction: Energy demand of world and country and gap analysis, Fossil fuel based systems, Impact of fossil fuel based systems, Non conventional energy – seasonal variations and availability, Renewable energy – sources and features, Hybrid energy systems, Distributed energy systems and dispersed generation (DG).

Unit-II

Solar thermal systems: Solar radiation spectrum, Radiation measurement, Technologies, Applications, Heating, Cooling, Drying, Distillation, Power generation; Costing : Life cycle costing (LCC), Solar thermal system
Solar Photovoltaic systems, Operating principle, Photovoltaic cell concepts, Cell, module, array, Series and parallel connections, Maximum power point tracking, Applications, Battery charging, Pumping, Lighting, Peltier cooling, Costing: Life cycle costing, Solar PV system

Unit-III

Microhydel: Operating principle, Components of a microhydel power plant, Types and characteristics of turbines, Selection and modification, Load balancing, Costing: Life cycle costing –Microhydel Wind ; Wind patterns and wind data, Site selection, Types of wind mills, Characteristics of wind generators, Load matching, Life cycle costing - Wind system LCC.

Unit-IV

Biomass: Learning objectives, Operating principle, Combustion and fermentation, Anaerobic digester, Wood gasifier, Pyrolysis, Applications, Bio gas, Wood stoves, Bio diesel, Combustion engine, Life cycle costing - Biomass system LCC
Hybrid Systems, Need for Hybrid Systems, Range and type of Hybrid systems, Case studies of Diesel-PV, Wind-PV, Microhydel-PV, Biomass-Diesel systems, electric and hybrid electric vehicles

Suggested Books:

2. Mittal K M, Non-Conventional Energy Systems, Wheeler Publishing Co. Ltd, New Delhi, 2003
3. Ramesh R & Kumar K U, Renewable Energy Technologies, Narosa Publishing House, New Delhi, 2004
4. Wakti MM, Power Plant Technology, Mc Graw Hill Book Co, New Delhi, 2004.

10(2266)

1. Introduction to simulation software for Electromagnetic.
2. Design & Characterization of Transmission line using simulation software.
3. To measure unknown impedance with Smith Chart.
4. Design & Characterization of Rectangular Waveguide using simulation software.
5. Design & Characterization of Circular Waveguide using simulation software.
6. Experimentally determine the frequency & Wavelength in a rectangular waveguide working in TE_{10} mode using microwaves bench.
7. To study the propagation of signal in good conductor using simulation software.
8. To study the propagation of signal in good Dielectric using simulation software.
9. To measure unknown impedance with Smith Chart.
10. Design & Characterization of Microstrip line using simulation software.

List of Experiments:

EC-303L Electromagnetic Waves Lab						
Lecture	Tutorial	Practical	Credit	Minor Test	Practical	Total
0	0	3	1	40	60	100
3 Hour	To give the students an idea about the study and analysis of components used in Microwave Engineering					
Course Outcomes						
CO1	Students will learn the steps to analyze electric field behavior.					
CO2	Students will be able to characterize standing wave ration and reflection Coefficient.					
CO3	Students will learn the steps to analyze types of waveguide.					
CO4	Students will be able to find the unknown impedances in a transmission line.					

1. Write a program to plot the following functions: a) impulse function b) unit step c) unit ramp d) exponential and e) sinusoidal .
2. Write a program to plot real part, imaginary part, magnitude and phase spectra of an exponential function.
3. Study the aliasing effect by using a sinusoidal signal. Show the plots of continuous time signal, sampled signal and reconstructed signals by using subplot.
4. Write a program to compute and plot the convolution of two signals.
5. Define a function to compute the Z-transform of a finite length signal.
6. Verify the properties of Discrete Fourier Transform (DFT).
7. Study of different window functions available for design of FIR filters.
8. Design of FIR filters by using windowing method.
9. Design of equiripple FIR filter.
10. Study of magnitude and phase response of Butterworth, Chebyshev and Elliptic filters.
11. Design of IIR filters by using different analog filter approximation method.

List of Experiments

Course Outcomes						
At the end of this course students will demonstrate the ability to						
CO1	Plot different discrete time signals					
CO2	Verify the aliasing effects					
CO3	Design digital FIR filters for various applications					
CO4	Design digital IIR filters for various applications					
-	-	2	1	-	40	60
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Major Test	Minor Test	Practical
3	100	Total	Time			

Pedagogy: Problem based learning, group discussions, collaborative mini projects.

ORGANIZATIONAL BEHAVIOUR							HM-901
Lecture	Tutorial	Practical	Credits	Major Test	Minor Test	Total	Time (Hrs)
3	0	0	3	75	25	100	3
Purpose: To make the students conversant with the basics concepts of organizational culture and behavior for nurturing their managerial skills.							
Course Outcomes							
CO 1	An overview about organizational behavior as a discipline and understanding the concept of individual behavior.						
CO 2	Understand the concept and importance of personality, emotions and its importance in decision making and effective leadership.						
CO 3	Enabling the students to know about the importance of effective motivation and its contribution in group dynamics and resolving conflicts.						
CO 4	Understand how to overcome organizational stress by maintaining proper organizational culture and effective communication						

UNIT-I

Introduction to organizational behavior: Concept and importance of organizational behavior, role of Managers in OB, foundations or approaches to organizational behavior, challenges and opportunities for OB.

Foundation of individual behavior: Biographical characteristics, concept of abilities and learning, learning and learning cycle, components of learning, concept of values and attitude, types of attitude, attitude and workforce diversity.

UNIT-II

Introduction to personality and emotions: Definition and Meaning of Personality, Determinants of Personality, Personality Traits Influencing OB, Nature and Meaning of Emotions, Emotions dimensions, concept of Emotional intelligence.

Perception and individual decision making: meaning of perception, factors influencing perception, rational decision making process, concept of bounded rationality. Leadership-trait approaches, behavioural approaches, situational approaches, and emerging approaches to leadership.

UNIT-III

Motivation: Concept and theories of motivation, theories of motivation-Maslow, two factor theory, theory X and Y, ERG Theory, McClelland's theory of needs, goal setting theory, application of theories in organizational scenario, linkage between MBO and goal setting theory, employee recognition and involvement program.

Foundations of group behavior and conflict management: Defining and classifying of groups, stages of group development, Informal and formal groups- group dynamics, managing conflict and negotiation, a contemporary perspective of intergroup conflict, causes of group conflicts, managing intergroup conflict through resolution.

UNIT-IV

Introduction to Organizational Communication: Meaning and importance of communication process, importance of organizational communication, effective communication, organizational stress: definition and meaning sources and types of stress, impact of stress on organizations, stress management techniques.

Introduction to Organization Culture: Meaning and nature of organization culture, types of culture, managing cultural diversity, managing change and innovation-change at work, resistance to change, a model for managing organizational change.

Note: The paper setter will set the paper as per the question paper template provided

Control System Engineering (6 th Semester)							Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	0	0	3	75	25	100	3 Hours	The purpose of this course is to create awareness about the various types of control systems with the techniques to analyze them so that the learner is able to mathematically design and evaluate the conditions for which a control system can provide stable output with improved performance.						
CO1	Learner will be able to design and simplify the mathematical and graphical models of a control system through block diagram and signal flow graph method.													
CO2	Learner can evaluate the conditions for which a system can work under stable conditions in time domain.													
CO3	Learner will know about easier graphically methods to evaluate the conditions of stability in frequency domain.													
CO4	Learner will be able to apply the compensation technique using state variable approach to convert an unstable system into a stable system under certain conditions.													

UNIT-I

Introduction: The Control system-Open loop & Closed loop, servomechanism, Stepper motor. Mathematical Models of Physical Systems: Differential equation of physical systems, Transfer Function, Block Diagram Algebra, Signal Flow-Graphs, Mason's Formula & its application, Feedback Characteristics of Control Systems: Feedback and Non-Feedback systems, Effects of Feedback on sensitivity (to parameter variations), Stability, Overall gain etc.

UNIT-II

Time Response Analysis: Standard test signals, Time response of first order and second order systems, Steady-State Errors and Error Constants, Design Specification of second-order systems. Stability: The concept of stability, necessary conditions for stability, Hurwitz Stability Criterion, Routh Stability Criterion, Relative Stability Analysis. The Root Locus Technique: The Root Locus Concept, Construction/development of Root loci for various systems, Stability considerations. Proportional, Integral and Derivative Controllers.

UNIT-III

Frequency Response & Stability Analysis: Correlation between Time and Frequency response, Polar Plots, Nyquist plots, Bode Plots, Nyquist Stability criterion, Gain margin & Phase margin, relative stability using Nyquist Criterion, frequency response specifications.

UNIT-IV

Compensation of Control Systems: Necessity of Compensation, Phase Lag compensation, Phase Lead Compensation, Phase Lag Lead Compensation, Feedback Compensation, State Variable Analysis: Concept of State, State Variable and State Model, State Models for Linear Continuous Time Systems, Diagonalization, Solution of state equations, Concept of Controllability and Observability.

Text Book: Control System Engg.: I. J. Nagrath & M. Gopal, New Age India.

Reference Books:

10(2274)

1. Automatic Control Systems: B.C. Kuo; PHI.
2. Modern Control Engg: K. Ogata; PHI.
3. Control Systems: Principles & Designing : Madan Gopal; TMH.

Modeling at data flow level: Introduction, Continuous Assignment Structures, Delays and Continuous Assignments, Assignment to Vectors, Operators, Additional Examples.

Unit-III

Gate level modeling: Introduction, AND Gate Primitive, Module Structure, Other Gate Primitives, Illustrative Examples, Tri-State Gates, Array of Instances of Primitives, Additional Examples, Design of Flip-flops with Gate Primitives, Delays, Strengths and Contention Resolution, Net Types, Design of Basic Circuits.

Behavioral modeling: Introduction, Operations and Assignments, Functional Bifurcation, Initial Construct, Always Construct, Examples, Assignments with Delays, Wait construct, Multiple Always Blocks, Designs at Behavioral Level, Blocking and Non-blocking Assignments, The case statement, Simulation Flow, if and ifelse constructs, assign-deassign construct, repeat construct, for loop, the disable construct, while loop, forever loop, parallel blocks, force-release construct, Event.

Unit-II

Introduction: Introduction, conventional approach to digital design, VLSI design, ASIC design flow, Role of HDL, Conventional Data flow, ASIC data flow, Verilog as HDL, Levels of Design Description, Concurrency, Simulation and Synthesis, Functional Verification, System Tasks, Programming Language Interface (PLI), Module, Simulation and Synthesis Tools, Test Benches.

Language constructs and conventions: Introduction, Keywords, Identifiers, White Space Characters, Comments, Numbers, Strings, Logic Values, Strengths, Data Types, Scalars and Vectors, Parameters, Memory, Operators, System Tasks.

Unit-I

Verilog HDL							
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Major Test	Minor Test	Total	Time(Hrs)
3	0	0	3	75	25	100	3
Course Objectives							
To familiarize the students with the conventions of the Verilog HDL programming, algorithmic levels of abstraction for modeling digital hardware systems, the concept of test-benches to create testing behavioral environments for simulation based verification.							
Course Outcomes							
At the end of this course the student should be able to							
CO1	To understand the constructs and conventions of the Verilog HDL programming.						
CO2	To understand the structural, register-transfer level (RTL), and algorithmic levels of abstraction for modeling digital hardware systems.						
CO3	To design and modeling of combinational and sequential digital systems						
CO4	To apply the concept of test-benches to create testing behavioral environments for simulation based verification.						

Switch level modelling: Introduction, Basic Transistor Switches, CMOS Switch, Bi-directional Gates, Time Delays with Switch Primitives, Instantiations with Strengths and Delays, Strength Contention with Trireg Nets.

Unit-IV

Functions, tasks, and user defined primitives: Introduction, Function, Tasks, User- Defined Primitives (UDP), FSM Design (Moore and Mealy Machines).
System tasks, functions, and compiler directives: Introduction, Parameters, Path Delays, Module Parameters, System Tasks and Functions, File-Based Tasks and Functions, Compiler Directives, Hierarchical Access, General Observations.

Text Books:

1. T. R. Padmanabhan, B. Bala Tripura Sundari (2004), Design through Verilog HDL, Wiley & Sons Education, IEEE Press, USA.
2. J. Bhaskar (2003), A Verilog Primer, 2nd edition, BS Publications, India.

Reference Books:

1. Samir Palnitkar (2013), Verilog HDL, Pearson India.
2. Stephen. Brown, Zvonko Vranesic (2005), Fundamentals of Logic Design with Verilog, Tata McGraw Hill, India.
3. Charles H. Roth (2004), Digital Systems Design using VHDL, Jr. Thomson Publications, India.

List of Experiments:

1. Write a Program to implement logic gates.
2. Write a Program to implement half-adder.
3. Write a Program to implement Full-adder.
4. Write a Program to implement 4 bit addition/subtraction.
5. Write a Program to implement a 3:8 decoder.
6. Write a Program to implement an 8:1 multiplexer.
7. Write a Program to implement an 1:8 demultiplexer.
8. Write a Program to implement 4 bit comparator.
9. Write a Program to implement Mod-10 up counter.
10. Write a Program to perform serial to parallel transfer of 4 bit binary number.
11. Write a program to perform parallel to serial transfer of 4 bit binary number.
12. Write a program to implement 8 bit ALU containing 4 arithmetic & 4 logic operation.

Verilog HDL Lab							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Practical	Total
0	0	3	1.5	0	40	60	100
3 Hour							
CO1 To describe, design, simulate, and synthesize circuits using the Verilog hardware							
CO2 To design and modeling of combinational and sequential digital system.							
CO3 To develop program codes for synthesis-friendly combinational and sequential logic.							
CO4 To understand the advanced features of Verilog HDL and be able to write optimized codes for complex systems.							

1. Using MATLAB obtain time response of a second order system in case of under damped, over damped and critically damped systems.
2. To design a passive RC lead compensating network for the given specifications and to obtain its frequency response.
3. To design a passive RC lag compensating network for the given specifications and to obtain its frequency response.
4. To obtain torque speed characteristics of AC servo motor.
5. To obtain torque speed characteristics of DC servo motor.
6. To determine frequency response of a second order system and evaluation of Frequency domain specifications.
7. To simulate a DC position control system and hence to find the step response using MATLAB.
8. Obtain the phase margin and gain margin for a given transfer function by drawing bode plots and verify the same using MATLAB.
9. To obtain Root locus of a given T. F. and hence finding breakaway point, intersection point on imaginary axis and to draw the Nyquist plot for the given transfer function using MATLAB.
10. To digitally simulate the time response characteristics of Linear SISO systems using state variable formulation.
11. Experiment to draw the frequency response of a given lead-lag compensating network.

List of Experiments:

Control System Engineering Lab							
Lecture	Tutorial	Practical	Credit	Minor Test	Practical	Total	Time
0	0	3	1.5	40	60	100	3 Hour
Purpose	To make students capable to design solutions for Control System engineering problems and design system components or processes that meet the specified needs of Modern automated engineering industries.						
Course Outcomes							
CO1	Students will be able to execute time response analysis of a second order control system using MATLAB						
CO2	Students will be able to design Lag, Lead, Lead-Lag compensators and verify experimental results using MATLAB.						
CO3	Analyze torque-speed characteristics of DC and AC servomotors.						
CO4	Analyze and interpret stability of the system through Root Locus, Bode plot and Nyquist plot.						

Antennas & Propagation							ECP-6
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	0	0	3	75	25	100	3 Hrs.
To familiarize the students with: Antennas used for various applications, performance parameters of antenna, methods of analysis of antenna, and different ways of propagating the signal.							Purpose
To Understand the structure and properties of various antennas.							CO1
To understand the performance parameters of antenna.							CO2
To design antenna of required specifications.							CO3
To understand the different ways of signal propagation.							CO4

Unit-1

Fundamental concept: Physical concept of radiation, Retarded potential, Radiation pattern, near- and far-field regions. **Antenna Parameters:** Radiation Resistance, Gain, Directive Gain, Power Gain, Directivity, Efficiency, Beam width, Effective Height, Effective Aperture, Bandwidth and Antenna Temperature.

Radiation from Wires: Radiation from Hertzian Dipole, Short Dipole, Monopole Antenna, Folded Dipole Antenna and Half Wave Dipole.

Unit-II

Antenna Arrays: Uniform Linear Arrays - Broadside Arrays, Endfire Arrays, Analysis of arrays of 2 Isotropic Sources - Different Cases, Analysis of arrays of N Isotropic Sources - Different Cases, Principle of Pattern Multiplication, Binomial Array, Chebyshev Array, TV Transmission & Reception Antennas: Turnstile Antennas, Yagi-Uda antennas. **Standard Antennas:** Loop Antenna (Rectangular & Circular), Helical Antenna, Biconical Antenna.

Unit-III

Aperture & Slot Antennas: Radiation from Rectangular Apertures, Uniform and Tapered Aperture, Horn antenna, Reflector Antenna, Cassegrain and Gregorian Feeding Structures, Rectangular Slot Antenna. **Broadband Antennas:** Huygens' Principle, The frequency independent concept: Rumsey's principle, Frequency Independent Planar Log Spiral Antenna, Frequency independent conical spiral antenna, Log periodic antenna, Lens Antenna.

Microstrip/Patch Antennas: Basic configurations of patch antennas: Rectangular, Circular. Different Feeding Techniques. Method to Analyze Patch antenna: Transmission Line Model.

Unit-IV

Propagation of Radio Waves: Introduction, Ground Wave Propagation, Space Wave Propagation and Sky Wave Propagation: Virtual Height, Critical Frequency, Maximum Usable Frequency (MUF) – Skip Distance, Fading, Multi Hop Propagation, Duct Propagation, Troposcatter Propagation, Flat Earth and Curved Earth Concept,

Sequential MOS Logic circuits: Behaviour of bistable elements, SR latch circuit, clocked latch and flip flop, CMOS D Latch and edge triggered flip flop

Unit-IV

Combinational MOS Logic: nMOS logic circuits with depletion nMOS load, CMOS logic circuits, complex logic circuits, CMOS pass gates

Unit -III

MOS Invertors: Introduction, resistive load inverter, inverter with n-type MOSFET load, CMOS inverter: circuit operation, noise margin, design of inverter, power and area consideration.

Unit -II

Introduction: Overview of VLSI Design Methodologies, VLSI Design flow, Design hierarchy, VLSI Design styles.
MOS Transistor: MOS structure, MOS system under external bias, structure and operation of MOSFET, C-V characteristics.

Unit-I

Course Outcomes							
ECP-7	Lecture	Tutorial	Practical	Major Test	Minor Test	Total	Time
	3	0	0	75	25	100	3 Hr.
CO1	Student will be able to analyze MOS transistor characteristics						
CO2	Student will be able to design CMOS inverter of specific characteristics						
CO3	Student will be able to design combinational CMOS circuit of given boolean equation						
CO4	Student will be able to design sequential CMOS circuit of given specification						

CMOS Design

Biomedical Electronics							
ECP-8	Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Major Test	Minor Test	Practical
3	-	-	-	3	75	25	-
At the end of this course students will demonstrate the ability to							
CO1	Understand and explain the concept of biomedical signals, electrodes and instrumentation						
CO2	Understand and explain the physiological transducers and recording systems						
CO3	Understand and explain biomedical recorders and patient monitoring systems						
CO4	Understand and explain cardiac pacemakers, defibrillator and patient safety						
	Total Time						100
							3

UNIT-I

Introduction: Role of technology in medicine, physiological systems of the body, sources of biomedical signals, basic medical instrumentation and their performance requirements, intelligent medical instrumentation systems, consumer and portable medical equipment, implantable medical devices, role of engineers in healthcare facilities.

Bioelectric Signals and Electrodes: Origin of bioelectric signals, recording electrodes, silver-silver chloride electrodes, electrodes for ECG, electrodes for EMG, electrical conductivity of electrode gellies and creams, microelectrodes.

UNIT-II

Physiological Transducers: Definition, classification and performance characteristics of transducers, displacement, position and motion transducers, pressure transducers, transducers for body temperature measurement, photoelectric transducers, optical fiber sensors, biosensors, smart sensors.

Recording System: Basic recording system, general considerations for signal conditioners, preamplifiers, sources of noise in low level measurements, biomedical signal analysis and processing techniques, the main amplifier and driver stage, wiring systems.

UNIT-III

Biomedical Recorders: Electrocardiograph (Vcg), phonocardiograph (Pcg), digital stethoscope, electroencephalograph (Eeg), electromyograph.

Patient Monitoring Systems: System concepts, cardiac monitor, bedside patient monitoring systems, central monitors, measurement of heart rate, measurement of temperature, measurement of respiration rate, catheterization laboratory instrumentation, ambulatory monitoring instruments.

UNIT-IV

Cardiac Pacemakers and Defibrillators: Need for cardiac pacemaker and defibrillator, external pacemakers, implantable pacemakers, pacing system analyzer, DC defibrillator, implantable defibrillators, types of defibrillators, defibrillator analyzer.

Patient Safety: Electric shock hazards, leakage currents, safety codes for electromedical equipment, electrical safety analyzer.

Text/Reference Books:

2. Joseph D. Bronzino: The biomedical engineering handbook, 2nd ed., CRC Press.

Scientific Computing							
ECP-9	Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Major Test	Minor Test	Practical
3	-	-	-	3	75	25	-
Course Outcomes							
At the end of this course students will demonstrate the ability to							
CO1	To understand the concept of computational linear algebra and apply the matrix decompositions techniques to solve the problems of linear algebra						
CO2	To understand the concept of Scientific computing and will be able to find the solution of linear and non linear equations						
CO3	To learn the concept of Vector functions, partial derivatives, gradient and tangent planes						
CO4	To understand the various numerical techniques for solving differential equations and use MATLAB to visualize the solutions practically.						
Total Time							100
							3

Unit -I

Introduction to Computational Linear Algebra
 Fundamental algorithms in computational linear algebra with relevance to all science concentrators. Basic linear algebra and matrix decompositions (Cholesky, LU, QR, etc.), round-off errors and numerical analysis of errors and convergence. Iterative methods and conjugate gradient techniques. Computation of eigenvalues and eigenvectors, and an introduction to least squares methods

Unit -II

Introduction to Scientific Computing
 Numerical computations; Includes instruction for programming in MATLAB. Applications solution of linear equations (with vectors and matrices) and nonlinear equations (by bisection, iteration, and Newton's method), interpolation, and curve-fitting, difference equations, iterated maps, numerical differentiation and integration, and differential equations.

Unit -III

Vector Functions; Derivatives, tangent vector velocity, acceleration, arc length of space curve, curvature and normal vectors, functions of two or more variables, limits and continuity, partial derivatives, directional derivatives, gradient and tangent planes, second derivative, maxima, minima, saddle point

Unit -IV

Introduction to Numerical Solution of Differential Equations
 Fundamental numerical techniques for solving ordinary and partial differential equations. Overview of techniques for approximation and integration of functions. Differential equations, First Order differential equations, variables separable form, solution of first order linear equation, second and higher order equations, solution of constant coefficient second order equation, Solution of two-point boundary value problems, introduction to methods for solving linear partial differential equations.

1. Calculus and Analytical Geometry (9th Edition) Thomas and Finney Pearson Education

2. Calculus (5th Edition) James Stewart

3. Advanced Engineering Mathematics (8th Edition) Erwin Kreyszig John Wiley and Sons

4. Linear Algebra (2nd edition) Hoffman and Kunz Prentice Hall International

5. Linear Algebra Peter D.Lax

6. Differentials Equations with applications and Historical notes. Simmons G.F

Text/Reference Books:

1.Data Structures using C by A. M. Tenenbaum, Langsam, Moshé J. Augentem, PHI Pub
2.Data Structures and program design in C by Robert Kruse, PHI Expert Data Structures with C
by R.B. Patel

Reference Books:
1.Data Structures using C by A. K. Sharma, Pearson Publication
2.Theory & Problems of Data Structures by Jr. Seymour Lipschetz, Schaum's outline by TMH.

Text Books:
Trees: Basic terminology, binary trees, representation of binary trees: linear and linked, traversal of binary trees
Graphs: graph terminology, representation of graphs: array based, linked list based, set based.

Unit-IV

Linked Lists: Introduction, Operations: Creation, Traversal, Searching, Insertion and Deletion. Circular and Doubly linked list, linked stacks and queues.

Unit-III

Stacks and Queues: Stacks: Stack operations, Application of Stacks, Queues: operations, circular queue, priority queue, deque
Pointers: Introduction, pointer variable, pointers and arrays, array of pointers, pointers and structures

Unit-II

Introduction: Concept of Data Structures, Design of suitable algorithm, algorithm analysis.
Arrays: 1-D arrays: Traversal, Selection, Searching, Insertion, Deletion and Sorting. Multi-D arrays, representation of arrays in physical memory, application of arrays

Unit-I

Course Outcomes							
ECO-5	Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Major Test	Minor Test	Total	Time
	3	-	-	75	25	100	3 Hr.
	3						
	Student will be able to determine the time complexity of various operations on arrays						
	CO1						
	Student will be able to select appropriate data structure for given application						
	CO2						
	Student will be able to create link list and apply various operations.						
	CO3						
	Student will be able to evaluate the traversal of binary trees and represent graphs						
	CO4						

1. Multimedia Systems" by Ralf Steinmetz and Klara Nahrstedt
2. Multimedia Systems, Standards, and Networks" by A. Puri and T. Chen

Reference Books:

1. Multimedia communications: Fred Halsall; Pearson Education Asia.

Text Books:

Retrieval Systems

Internet Applications: Domain name System, Electronic Mail, Internet Telephony, Content Based Image Retrieval Systems

Multimedia Synchronization: Basic definitions and requirements Time stamping and Pack architecture.

UNIT-IV

Implementation Schematics of I, P and B frames, H.261, H.263.

Video Compression: Video Compression principles, Frame types, Motion estimation and compensation,

Predictive coding, linear predictive coding and MPEG audio coders,

Audio Compression: Differential Pulse Code Modulation, Adaptive Differential PCM, Adaptive

UNIT-III

Group (JPEG).

Image Compression: Graphics interchange format, Tagged image file format, Joint Photographic Experts

Dynamic Huffman Coding, Arithmetic Coding, Lempel Ziv and Lempel Ziv welsch coding.

Text Compression: Compression principles, Text Compression techniques: Static Huffman Coding,

UNIT-II

Digitization Principles, Representation of Text, Images, Audio and Video.

and Entertainment applications.

Television Networks, ISDN, B-ISDN, Multimedia Applications: Interactive applications over the internet

Multimedia Communication: Introduction, Multimedia networks: Telephone networks, Data networks,

UNIT-I

Multimedia Communication							
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3 Hrs.
PO	To familiarize the students with the concepts of basic multimedia communication systems and various compression algorithms of text, audio, image and video.						
Course Outcomes (CO)							
CO1	Students will understand the concept of multimedia communication system along with its applications and networks in detail.						
CO2	Students will be able to learn the concept of compression in detail. They will understand the techniques of text and image compression.						
CO3	In this outcome students will be well prepared of audio and video compression.						
CO4	Students will understand the concept internet, its applications and CBR systems						

- R.R. Gulati "Modern Television practices", New Age International Publication (P) Ltd. New Delhi Year 2011, latest edition.
- S.P. Bali, "Consumer Electronics", Pearson Education, 2010, latest edition.

TEXT BOOKS:

FAX, Microwave Oven: types, single chip controllers, Washing Machine: wiring diagram, electronic controller for washing machine, types of washing machine, Air conditioner and Refrigerators: Components features, types and applications, Digital camera, ATM.

UNIT-IV

Audio Fundamentals: Basic characteristics of sound signal: level and loudness, pitch, frequency response, fidelity and linearity, Reverberation, Microphone: working principle, characteristics, Types: carbon, condenser, crystal, electrostatic. Loudspeakers: working principle, Types: electrostatic, dynamic, permanent magnet.

UNIT-III

Digital TVs: working principle of HDTV, Principle and working of LCD and LED TV, Block diagram and working principle of OLED. Television Receivers: Monochrome and colour picture tube, receiver controls, remote control, Television standards: PAL, SECAM, NTSC.

UNIT-II

Monochrome TV Systems and Colour TV Systems: Monochrome picture signal transmission and reception, scanning process, aspect ratio, persistence of vision and flicker, interlace scanning, picture resolution, Composite video signal, vestigial sideband transmission. Colour theory, Grassman's Law, hue, brightness, saturation, luminance and chrominance, Different types of TV camera tube, channel bandwidth.

UNIT-I

Consumer Electronics							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	0	0	3	75	25	100	3
Course Outcomes							
CO1	To understand fundamentals of Monochrome and Colour TV systems.						
CO2	To understand television receivers and digital TV systems.						
CO3	To understand audio fundamentals and systems.						
CO4	To maintain various electronic home appliances.

Suggested Books:

transducer, digital methods.
Measurement of Torque – Torque meter, torsion meter, absorption dynamometers, inductive torque
Measurement of Force – Strain-gage load cells, pneumatic load cell, LVDT type force transducer.

Unit-IV

tachometer, toothed rotor tachometer generator.
Measurement of Velocity – variable reluctance pick up, electromagnetic tachometers, photoelectric
 differential transformer (L.V.D.T), capacitive transducers, Hall effect devices, strain gage transducers.
Measurement of Displacement – Potentiometric resistance type transducers, inductive type transducers,

Unit-III

thermo-electric sensors, pyrometers.
of Temperature – Metallic resistance thermometers, semi conductor resistance sensors (Thermistors),
Measurement of Pressure – Manometers, Force summing devices and electrical transducers. **Measurement**

Unit-II

piezoelectric, photoelectric and Hall Effect transducers.
 Primary and Secondary Transducer, Analog or digital types of transducers. Resistive, inductive, capacitive,
 Definition of transducer. Advantages of an electrical signal as out-put. Basic requirements of transducers,

Unit-I

Course Outcomes							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	0	0	3	75	25	100	3
Understand the structural and functional principles of sensors and transducers used for various physical and non-electric quantities and how to use them to measure these quantities.							
CO 1 Explain the principles of operation of the sensor parameters and generators							
CO 2 Interpretation of the measurement results by using transducers.							
CO 3 Development of measurement schemes for different non electrical quantities							
CO 4 Assimilating knowledge about the implementation of sensors and transducers.							

Transducers & Its Applications

HM-904	Intellectual Property Rights for Technology Development & Management				Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
	Course Outcomes											
CO1	Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasize the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular.											
CO2	Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.											
CO3	To understand different laws related to the Intellectual Property, copyright, trademark, patent act, duration of patents law and policy considerations											
CO4	Understand New Developments in IPR, administration of patent system, IPR of biological systems etc.											

Unit-I
 Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

Unit-II
 Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications.

Unit-III
 Law relating to Intellectual property: Introduction – meaning of intellectual property, main forms of IP, Copyright, Trademarks, Patents and Designs, Secrets; Law relating to Copyright in India including Historical evolution of Copy Rights Act, 1957, Meaning of copyright – computer programs, Ownership of copyrights and assignment, Criteria of infringement, Piracy in Internet – Remedies and procedures in India; Law relating to Patents under Patents Act, 1970 including Concept and historical perspective of patents law in India, Patentable inventions with special reference to biotechnology products, Patent protection for computer programs, Process of obtaining patent – application, examination, opposition and sealing of patents, Patent cooperation treaty and grounds for opposition, Rights and obligations of patentee, Duration of patents – law and policy considerations, Infringement and related remedies;

Unit-IV
 New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

BIOINFORMATICS							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
Purpose The Purpose of this course to provide focus on the key concepts of Bioinformatics like biological databases, Sequence Alignment, Phylogenetic Analysis, Plasmid Mapping And Primer Design and Predictive Methods using nucleotide sequences and protein sequences							
Course Outcomes							
CO1	Students will be able to illustrate with the basic principles of various types of databases						
CO2	Students will be able to perform various tools related to sequence alignment and statistical significance of alignment						
CO3	Student will develop the knowledge of various software tools for sequence analysis and primer designing						
CO4	Students will be able to differentiate between predictive methods for nucleotides and protein sequence analysis						

UNIT I

Databases

- Sequence Databases: introduction of Databases, primary and secondary databases, nucleotide and protein sequence databases: Genbank, EMBL, DDBJ, Swissprot, pfam, PIR
 - Structure Databases: Introduction to structures, PDB (Protein Data bank) Molecular Modeling database at NCBI, visualizing structural information.
 - Sequence and Structure File Formats.
- The Entrez system:** Integrated information axis, Information retrieval from biological databases, sequence database beyond NCBI, Medical databases.

UNIT II

Sequence Alignment AND Database Searches

Introduction, the evolutionary basis of sequence alignment, Type of Alignments, Pair-wise Alignment, Multiple Alignment, The modular nature of proteins, Optimal alignment methods, substitution scores and gap penalties, statistical significance of alignment, FASTA, BLAST, low-complexity regions, repetitive elements, Tool of multiple sequence alignment: CLUSTAL W/X, progressive alignment method.

Phylogenetic Analysis:

Elements of phylogenetic models, phylogenetic data analysis: alignment, substitution model building, tree building and tree evaluation, building the data model (alignment), determining the substitution model, tree-building methods, searching for trees, rooting trees, evaluation trees and data, phylogenetic software (PHYLIP), phylogenetics online tool.

UNIT III

Sequence Analysis Using Software Resources:

Introduction. The Wisconsin package, the Seq Lab environment, analyzing sequences with operations and Wisconsin package programs, viewing output, monitoring programme progress and troubleshooting problems, annotating sequences and graphically displaying annotations in the SeqLab Editor, saving sequences in the Seq Lab Editor, Example of analysis that can be undertaken in SeqLab,

UNIT IV

Plasmid Mapping And Primer Design

Restriction mapping, Mac Vector and OMIGA, primer design for PCR Sequencing, primer design programs and software.

Predictive Methods using nucleotide sequences and protein sequences: Predictive methods using nucleotide sequences: Introduction, Gene prediction methods, Computational gene prediction in eukaryotes, identify based on composition, physical properties based on sequence, prediction of protein secondary and tertiary structures. Related software.

Text Books-

1. Bioinformatics by Andreas D.Boxevanis. Wiley Interscience, 4th edition 2020.
2. Essential bioinformatics by Jin Xiong. Cambridge Uni Press 2020
3. Biocomputing Informatics and The Genome Projects by Smith D.W., Academic Press, 2014.
4. Bioinformatics: A Biologists Guide to Computing and the Internet. by Stuart M. Brown, NKU Medical Center, NY USA, 2000.

Note: The Examiner will be given the question paper template and will have to set the question paper according to the template provided along with the syllabus.

Electro-Mechanical Energy Conversion						
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total
3	-	-	3	75	25	100
Purpose To provide the constructional and working knowledge of various EMEC Devices.						
Course Outcomes						
CO 1	To study various fundamental concepts of EMEC & DC machines.					
CO 2	To study fundamental concepts and characteristics of Induction Machines.					
CO 3	To study the basics of Synchronous Machines					
CO 4	To study working idea of some special electric motors with applications.					

UNIT-I (Qualitative analysis only)

Introduction: Basic principles, conservation of energy, physical phenomenon involved in conversion, energy balance, energy stored in magnetic field, principles of Generating and motoring, prime movers, necessity of starters in motoring.

DC MACHINES:

DC generator: Basic construction, theory and working, commutation, generated EMF equation, Demagnetizing and cross magnetizing ampere turns, armature reaction, voltage build-up, brief idea of load characteristics of shunt, series and compound generator.
DC motor: Basic construction, theory and working, concept of back EMF, torque and power equations, brief idea of load characteristics of shunt, series and compound motor, armature and field control methods of speed control of a DC shunt motor, 3 point starter.

UNIT-II (Qualitative analysis only)

INDUCTION MACHINES:
3-phase induction motors: Rotating magnetic field, Basic construction, theory and working of squirrel cage and phase wound rotor types of 3-phase I.M., slip, Torque-slip and load characteristics. Blocked rotor tests power and BHP developed at shaft. Star delta starting.
Single phase Induction Motor: Basic construction of double revolving field theory, working of a capacitor start capacitor run Single phase Induction motor.

UNIT-III (Qualitative analysis only)

SYNCHRONOUS MACHINES:
Synchronous generator (alternator): Basic construction, theory and working, types of rotors & excitation systems.

Synchronous motor: Basic construction, theory and working of, locking operation, speed torque characteristics, V - Curves. Hunting - causes and remedies.

UNIT-IV (Qualitative analysis only)

SPECIAL ELECTRICAL MACHINES:
Basic concept and working ideas of: Stepper motor, permanent magnet brushless DC motor, permanent magnet synchronous motor, hysteresis motor, synchronous reluctance motor, repulsion motor.
Industrial and domestic applications and comparison of various types of motors.

ECO-11								Operating Systems							
Lecture	Tutorial	Practical	Credits	Major Test	Minor Test	Total	3 Hr.	Course Outcomes							
								0	0	3	75	25	100	0	0
CO1								Student will be able to understand structure and function of OS.							
CO2								Student will be able to understand the concept of OS							
CO3								Student will be able to understand the concurrent processing							
CO4								Student will be able to understand scheduling and deadlock in OS.							

Unit- I

Introduction: OS functions: as user/computer interface, interaction with OS, commands, efficient resource manager, security and protection, evolution of OS, OS structure and future trends.

Unit- II

OS Prerequisites: Important software resources, interaction with OS in mainframe systems: PSW, controlling i/o, interrupt priority, interrupt cycle. Fundamental concept related to IPC.

Unit- III

Concurrent Processing : Introduction, process concept, process control block, exec sys, concurrent program, process state transitions, hierarchy of processes.

Unit-IV

Scheduling: CPU scheduling algorithms: allocation of different resources, scheduling queues, different scheduling algorithms.
Deadlock: Introduction, deadlock and starvation, resource allocation graph, way to solve deadlock.

Text Books:

1. P. P Choudhary, Operating Systems by PHI Learning Pvt Ltd.

Reference Books:

1. Operating Systems : Internals and Design Principles, William Stallings, Pearson
 2. Operating System Concepts", Abraham Silberschatz, Peter Baer Galvin, and Greg Gagne, Wiley

Note: Question paper template will be provided to the paper setter.

WAVELETS						
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total
3	-	-	3	75	25	100
Purpose						
To understand the concept of wavelet theory and applications.						
Course Outcomes						
At the end of this course, student will be able to						
CO 1	Interpret stationary and non-stationary signals					
CO 2	Construct continuous wavelet transform					
CO 3	Develop discrete wavelet transform					
CO 4	Apply wavelets in different applications					

Unit-I
Introduction Stationary and non-stationary signals, Signal representation using basis and frames, Brief introduction to Fourier transform and Short time Fourier transform, Time-frequency analysis, Bases of time frequency: orthogonal, Filter banks, Multi resolution formulation: Wavelets from filters, Classes of wavelets: Haar, Daubechies, bi-orthogonal.

Unit-II
Continuous Wavelet Transform Continuous wavelet transform (CWT), Time and frequency resolution of the continuous wavelet transform, Construction of continuous wavelets: Spline, orthonormal, bi-orthonormal, Inverse continuous wavelet transform, Redundancy of CWT, Zoom property of the continuous wavelet transform, Filtering in continuous wavelet transform domain.

Unit-III
Discrete Wavelet Transform And Filter banks Orthogonal and bi-orthogonal two-channel filter banks, Design of two-channel filter banks, Tree-structured filter banks, Discrete wavelet transform, Non-linear approximation in the Wavelet domain, multi resolution analysis, Construction and Computation of the discrete wavelet transform, the redundant discrete wavelet transform.

Unit-IV
Multi Resolution Analysis Multirate discrete time systems, Parameterization of discrete wavelets, Bi-orthogonal wavelet bases, Two dimensional, wavelet transforms and Extensions to higher dimensions, wave packets, Application of wavelets in signal de-noising.

TEXT BOOKS:

1. A Wavelet Tour of Signal Processing, 2nd edition, S. Mallat, Academic Press, 1999.
2. Wavelets and Sub band Coding, M. Vetterli and J. Kovacevic, Prentice Hall, 1995.
3. Wavelet transforms: Introduction, Theory and applications, Raghuvveer rao and Ajit S. Bopardikar, Pearson Education Asia, 2000.

Soft Computing							
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Major Test	Minor Test	Total	Time
3	-	-	3	75	25	100	3Hr
Purpose To familiarize the students with the basics of Soft Computing							
Course Outcomes							
CO1	Motivation and historical background of Soft Computing.						
CO2	Application of Fuzzy logic.						
CO3	Biologically inspired algorithm such as neural networks, genetic algorithms, ant colony optimization, and bee colony optimization.						
CO4	Hybrid systems of neural network, genetic algorithms and fuzzy systems.						

Unit-I

Soft Computing and Artificial Intelligence: Introduction of Soft Computing, Soft Computing vs. Hard Computing, Various Types of Soft Computing Techniques, Applications of Soft Computing, AI Search Algorithm, Predicate Calculus, Rules of Interference, Semantic Networks, Frames, Objects, Hybrid Models

Unit-II

Artificial Neural Networks and Paradigms: Introduction to Neuron Model, Neural Network Architecture, Learning Rules, Single Layer Perceptrons, Multilayer Perceptrons, Back propagation Networks, Kohonen self-organizing networks, Hopfield network, Applications of NN.

Unit-III

Fuzzy Logic: Introduction, Fuzzy sets and Fuzzy reasoning, Basic functions on fuzzy sets, relations, rule-based models and linguistic variables, fuzzy controls, Fuzzy decision making, applications of fuzzy logic.

Unit-IV

Genetic Algorithms and Swarm Optimizations: Introduction, Genetic Algorithm, Fitness Computations, Cross Over, Mutation, Evolutionary Programming, Classifier Systems, Genetic Programming, Parse Trees, Variants of GA, Applications, Ant Colony Optimization, Particle Swarm Optimization, Artificial Bee Colony Optimization.

Text Books:

1. Simon S. Haykin, Neural Networks, Prentice Hall, 2nd edition.
2. Timothy J. Ross, "Fuzzy Logic with Engineering Applications", McGraw Hill.
3. D.E. Goldberg, "Genetic Algorithms: Search, Optimization and Machine Learning", Addison Wesley, N.Y.

Reference Books:

1. Zimmermann, "Fuzzy Set Theory and its Application", 3rd Edition.
2. B. Yegnanarayana, "Artificial Neural Networks", PHI.
3. Jacek M. Zurada, Introduction to Artificial Neural Systems, Jaico Publishing House.
4. Jang J.S.R., Sun C.T. and Mizutani E, "Neuro-Fuzzy and Soft computing", Prentice Hall.

- References:**
- Elaine Rich and Kevin Knight "Artificial Intelligence", 2nd Edition, Tata Mcgraw-Hill, 2005.
 - Stuart Russel and Peter Norvig, "Artificial Intelligence: A Modern Approach", 3rd

Neuro-fuzzy hybrid systems - genetic neuro hybrid systems - genetic fuzzy hybrid and fuzzy genetic hybrid systems - simplified fuzzy ARTMAP - Applications: A fusion approach of multispectral images with SAR, optimization of traveling salesman problem using genetic algorithm approach, soft computing based hybrid fuzzy controllers.

UNIT IV - HYBRID SOFT COMPUTING TECHNIQUES & APPLICATIONS

Membership functions: features, fuzzification, methods of membership value assignments-Defuzzification: lambda cuts - methods - fuzzy arithmetic and fuzzy measures: fuzzy arithmetic - extension principle - fuzzy measures of fuzziness - fuzzy integrals - fuzzy rule base and approximate reasoning : truth values and tables, fuzzy propositions, formation of rules-decomposition of rules, aggregation of fuzzy rules, fuzzy reasoning-fuzzy inference systems-overview of fuzzy expert system-fuzzy decision making.

UNIT III - FUZZY LOGIC

McCulloch-Pitts neuron - linear separability - hebb network - supervised learning network: perceptron networks - adaptive linear neuron, multiple adaptive linear neuron, BPN, RBF, TDNN- associative memory network: auto-associative memory network, hetero-associative memory network, BAM, hop field networks, iterative auto associative memory network & iterative associative memory network - unsupervised learning networks: Kohonen self organizing feature maps, LVQ - CP networks, ART network.

UNIT II - NEURAL NETWORKS

Artificial neural network: Introduction, characteristics- learning methods - taxonomy - Evolution of neural networks-basic models - important technologies - applications. Fuzzy logic: Introduction - crisp sets-fuzzy sets - crisp relations and fuzzy relations: cartesian product of relation - classical relation, fuzzy relations, tolerance and equivalence relations, non-iterative fuzzy sets. Genetic algorithm- Introduction - biological background - traditional optimization and search techniques - Genetic basic concepts.

UNIT I - INTRODUCTION

Course Outcomes						
ECO-14	Neural Networks and Fuzzy Logic	Lecture	Tutorial	Practical	Credit	Major Test
						Minor Test
						Total
						Time
3	0	0	3	75	25	100
						3 Hr.
CO1	Understand the concept of Artificial Intelligence, search techniques and knowledge representation issues					
CO2	Understanding reasoning and fuzzy logic for artificial intelligence					
CO3	Students will be able to learn defuzzification and fuzzy measures					
CO4	Students will be able to learn the applications of fuzzy logic and hybrid soft computing techniques					

- Edition, Prentice Hall, 2009.
 Text book(s) and/or required material
 1. T1. Kirtivan- Fuzzy System & Fuzzy logic Prentice Hall of India, First Edition.

Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Course Outcomes		
							3	0	0
ECO-15	Statistics and Operational Research								
								3Hr.	
CO1	The Objective of the paper is to introduce the basic concepts of Operational Research and linear programming to the students								
CO2	Student will be able to learn and apply different methods to solve Linear Programming Problem.								
CO3	Student will be able to learn moments, standard deviation, correlation, regression								
CO4	Students will be able large sample test for single proportion, difference of means, difference of proportions								

UNIT-I

Basics of Operational Research: Origin & Development of Operational Research, Definition and Meaning of Operational Research, Different Phases of an Operational Research Study, Scope and Limitations of Operational Research, Mathematical Modeling of Real Life Problems.

UNIT-II

Linear Programming Problem: Formulation, solution by Graphical Method, Theory of Simplex Method, Simplex Algorithm, Two phase Method, Charnes-M Method, Degeneracy,

UNIT-III

Basic Statistics: Measures of Central tendency: Mean, median, quartiles, mode, Geometric mean, Harmonic mean, Measures of dispersion: Range, Quartile deviation, mean deviation, standard deviation, coefficient of variation, Moments, Skewness and Kurtosis, Correlation, Coefficient of correlation, methods of calculations, Lines of regression, Rank correlation.

UNIT-IV

Test of significance: Basic terminology, large sample test for single proportion, difference of proportions, single mean, difference of means, Small samples test for single mean, difference of means, Chi-square test for goodness of fit

Mixed Signal Design							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	0	0	3	75	25	100	3 Hr.
Purpose This course teaches how in real life applications both analog and digital circuits can be implemented for various system design.							
Course Outcomes							
CO1	To know basics and working of various Switched-Capacitor Circuits.						
CO2	To understand various PLL circuits.						
CO3	To gain knowledge on various D/A and A/D converters.						
CO4	To apply knowledge of different architectures in mixed signal circuits for real life problems.						

Unit-I

Switched-Capacitor Circuits

Introduction to Sampling Switches: MOSFETS as switches, speed considerations, precision considerations, charge injection cancellations. Switched-Capacitor Amplifiers: Unity Gain Sampler-Buffer, Noninverting Amplifier, Precision Multiply-by-Two Circuit. Switched-Capacitor Integrator, Switched-Capacitor Common-Mode Feedback.

Unit- II

Phase Locked Loop

Characterization of a comparator, basic CMOS comparator design, analog multiplier design, PLL-simple PLL, charge-pump PLL, Applications of PLL

Unit- III

D/A Converter

Sample-and-Hold Characteristics, DAC Specifications, DAC Architectures: Digital Input Code, Resistor Steering, R-2R Ladder Networks, Current Steering, Charge-Scaling DACs, Cyclic DACs, Pipeline DACs.

Unit- IV

A/D Converter

ADC Specifications, ADC Architectures: Flash, The Two-Step Flash ADC, The Pipeline ADC, Integrating ADCs, The Successive Approximation ADC, The Oversampling ADC. Applications of DACs and ADCs.

TEXT BOOKS:

1. Jacob Baker, "CMOS circuit design, layout and simulation", John Wiley India.
2. Razavi, "Design of analog CMOS integrated circuits", McGraw Hill, Edition 2002.

Blockchain Technology							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
(Hrs.)	(Hrs.)	(Hrs.)		Test	Test		
3	-	-	3	75	25	100	3Hr
Course Outcomes							
CO1	Understand how blockchain systems (mainly Bitcoin and Ethereum) work						
CO2	To securely interact with them						
CO3	Design, build, and deploy smart contracts and distributed applications						
CO4	Integrate ideas from blockchain technology into their own projects.						

Unit I

Basics: Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table, ASIC resistance, Turing Complete. •
 Cryptography: Hash function, Digital Signature - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof.

Unit II

Blockchain: Introduction, Advantage over conventional distributed database, Blockchain Network, Mining Mechanism, Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain.

Unit III

Distributed Consensus: Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.

Unit IV

Cryptocurrency: History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contract, GHOST, Vulnerability, Attacks, Sidechain, Namecoin

Text Book

1. Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller and Steven Goldfeder, Bitcoin and Cryptocurrency Technologies: A Comprehensive Introduction, Princeton University Press (July 19, 2016).

2. Reference Books

1. Antonopoulos, Mastering Bitcoin: Unlocking Digital Cryptocurrencies
2. Satoshi Nakamoto, Bitcoin: A Peer-to-Peer Electronic Cash System
3. DR. Gavin Wood, "ETHEREUM: A Secure Decentralized Transaction Ledger," Yellow paper.2014.
4. Nicola Atzei, Massimo Bartoletti, and Tiziana Cimoli, A survey of attacks on Ethereum smart contracts

Fiber Optic Communications						
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total
3	0	0	3	75	25	100
						3 Hr.
Course Outcomes						
CO1	Students will be able to understand the structure of fiber and the mechanism of light travelling in the fiber.					
CO2	Students will be able to analyze various losses associated with fibers.					
CO3	Students will learn about the optical sources and optical detectors.					
CO4	Students will be able to understand the various components and devices required in making optical networks					

UNIT - I

INTRODUCTION : Optical Fibers: Structure, Propagation within the fiber, Numerical aperture of fiber, acceptance angle, step index and graded index fiber, Modes of propagation in the fiber, Single mode and multi mode fibers. Splices and connectors. Optical Power Launching and Coupling. Fiber-to-fiber joints.

UNIT - II

LOSSES IN OPTICAL FIBER : Attenuation, Absorption Losses, Scattering Losses, Leaky modes, Mode coupling losses, Bending Losses, Combined Losses in the fiber.

DISPERSION EFFECT : Effect of dispersion on the pulse transmission, Intermodal dispersion, Material dispersion, Wave guide dispersion, Polarization Mode Dispersion, Total dispersion, Transmission rate. Dispersion Shifted Fibers, Dispersion Compensating Fibers.

UNIT - III

LIGHT SOURCES : LEDs, Laser Action in semiconductor Lasers, Semiconductor Lasers for optical communication – Laser modes, Spectral Characteristics, Power Voltage Characteristics, Frequency response.

DETECTORS : P-I-N Photodiode, APD, Noise Analysis in detectors, Coherent and non-coherent detection, Infrared sensors. Bit error rate.

UNIT - IV

The fiber-optic Communication System: Design considerations of fiber optic systems: Analog and digital modulation. Optical Devices: Optical coupler, space switches, linear divider-combiners, WDM: strategy, wavelength division multiplexer and demultiplexer, optical amplifier
OPTICAL NETWORKS: Elements and Architecture of Fiber-Optic Network, Optical link network-single hop, multiplex, hybrid and photonic networks.

Suggested Books:

John Power, An Introduction to Fiber optic systems, McGraw Hill International.
 John Gowar, Optical communication Systems.
 R. Ramaswamy, Optical Networks, Narosa Publication
 John M. Senior, Optical Fiber Communication
 Gerd Keiser, Optical Fiber Communication

Mobile Communication and Networks							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
(Hrs.)	(Hrs.)	(Hrs.)					
3	-	-	3	75	25	100	3 Hrs.
Course Outcomes (CO)							
To expose the students to the most recent technological developments in Mobile communication systems.							
CO1	To familiarize the students with the fundamental concepts of wireless, cellular technology						
CO2	And signal propagation in mobiles						
CO3	Students will be able to learn the detail knowledge of GSM and GPRS.						
CO4	After this unit students will understand the wireless access techniques and standards						
Students will understand the concept of mobile receivers.							

UNIT-I

Cellular concepts: Cell structure, frequency reuse, cell splitting, channel assignment, handoff, interference, capacity, power control; Wireless Standards: Overview of 2G and 3G cellular standards.

Signal propagation: Propagation mechanisms- reflection, refraction, diffraction and scattering, large scale signal propagation and lognormal shadowing. Fading channels-Multipath and small scale fading- Doppler shift, statistical multipath channel models, narrowband and wideband fading models

UNIT-II

Mobile System and Network Architectures GSM Services and Features – GSM system Architecture, GSM radio subsystem, Frame structure for GSM, Signal processing in GSM, GPRS Network architecture, GPRS services and features, 3G UMTS network architecture, UMTS services and features.

UNIT-III

Wireless Standards Multiple access techniques: FDMA, TDMA and CDMA, Wireless networking, Design issues in personal wireless systems, Cordless systems and Wireless Local Loop (WLL), IEEE 802.16 Fixed Broadband Wireless Access standard, Mobile IP and Wireless Application protocol.

UNIT-IV

Receiver structure: Diversity receivers- selection and MRC receivers, RAKE receiver, equalization: linear-ZFE and adaptive, DFE. Transmit diversity-Altamonte scheme.

Text Books

1. Rappaport, T.S., "Wireless Communications", Principles and Practice, Prentice Hall, NJ, 1996.
2. William Stallings, "Wireless Communication and Networking", Pearson Education, 2002.

ECP - 12	Adaptive Signal Processing					
Lecture	Tutorial	Practical	Credit	MajorTest	MinorTest	Total Time
3	0	0	3	75	25	100 3 Hr.
Course Outcomes						
CO1	To understand various stochastic processes and models in adaptive signal processing.					
CO2	To understand the analysis of Wiener filters, the concept of the linear prediction and steepest descent algorithms.					
CO3	To use Least-Mean-Square (LMS) & Recursive Least-Squares (RLS) algorithms for specific engineering problems.					
CO4	To apply the concept robustness and analysis the Finite-Precision effects on LMS and RLS algorithms.					

Unit - I

Stochastic Processes and Models: Partial Characterization of a Discrete-Time Stochastic Process, Mean Ergodic Theorem, Correlation Matrix, Correlation Matrix of Sine Wave Plus Noise, Stochastic Models, World Decomposition, Asymptotic Stationarity of an Autoregressive Process, Yule-Walker Equations, Wiener Filters: Linear Optimum Filtering: Statement of the Problem, Principle of Orthogonality, Minimum Mean-Square Error, Wiener-Hopf Equations, Error-Performance Surface, Multiple Linear Regression Model.

Unit - II

Linear Prediction: Forward Linear Prediction, Backward Linear Prediction, Levinson-Durbin Algorithm, Properties of Prediction-Error Filters, Schur-Cohn Test.
Method of Steepest Descent: Basic Idea of the Steepest-Descent Algorithm, The Steepest-Descent Algorithm Applied to the Wiener Filter, Stability of the Steepest-Descent Algorithm, Example, The Steepest-Descent Algorithm as a Deterministic Search Method, Virtue and Limitation of the Steepest-Descent Algorithm.

Unit - III

The Least-Mean-Square (LMS) Algorithm: Signal-Flow Graph, Optimality Considerations, Applications, Statistical Learning Theory, Transient Behavior and Convergence Considerations, Efficiency, The Recursive Least-Squares (RLS) Algorithm: Some Preliminaries, The Matrix Inversion Lemma, The Exponentially Weighted RLS Algorithm, Selection of the Regularization Parameter, Update Recursion for the Sum of Weighted Error Squares, Example: Single-Weight Adaptive Noise Canceller.

Unit - IV

Robustness: Robustness, Adaptation, and Disturbances, Robustness of the RLS Algorithm, Comparative H_{∞} Optimization, Robustness of the LMS Algorithm, Robustness from the Perspective of Robustness. Evaluations of the LMS and RLS Algorithms from the Perspective of Robustness.
Finite-Precision Effects: Quantization Errors, Least-Mean-Square (LMS) Algorithm, Recursive Least-Squares (RLS) Algorithm, Summary and Discussion.

TEXT BOOKS:

1. S. Haykin, Adaptive filter theory, Pearson

ECP-13		NANO-ELECTRONICS						
Course No.	Course Title	Teaching Schedule			Allotment of Marks			Duration of Exam (Hrs.)
		L	T	P	Major Test	Minor Test	Total	
		3	0	0	75	25	100	3
Course Outcomes								
CO 1	Students will Understand the basic physics behind the nanoelectronics devices							
CO 2	Students be able learn various classification of the nano-materials.							
CO 3	To Understand various fabrication methods of nonmaterials.							
CO 4	Students will learn to characterize various nanomaterials using various characterization tools.							

UNIT-I
Introduction to nanotechnology, Impacts, Limitations of conventional microelectronics, Trends in microelectronics and optoelectronics, Mesoscopic physics, trends in microelectronics and optoelectronics, characteristic lengths in mesoscopic systems, Quantum mechanical coherence

UNIT- II
Classification of Nano structures, Low dimensional structures Quantum wells, wires and dots, Density of states and dimensionality, Basic properties of two dimensional semiconductor nanostructures, square quantum wells of finite depth, parabolic and triangular quantum wells.

UNIT-III
Introduction to methods of fabrication of nanomaterials, different approaches, physical vapour deposition, chemical vapour deposition, Molecular Beam Epitaxy, Ion Implantation, Formation of Silicon Dioxide-dry and wet oxidation methods.

UNIT-IV
Introduction to characterization of nanostructures, tools used for of nano materials characterization: Principle of operation of Scanning Tunneling Microscope, Atomic Force Microscope, Scanning Electron microscope, Transmission Electron Microscope.

Text Books:
1. J.M. Martinez-Duart, R.J. Martin Palma, F. Agulle Rueda Nanotechnology for Microelectronics and optoelectronics, Elsevier, 2006

3. K. Gosser, P. Glosekotter, J. Dienstuhl, Nanoelectronics and nanosystems, Springer 2004.
4. Murty, Shankar, Text book of Nanoscience and Nanotechnology, Universities Press, 2012.
5. Poole, Introduction to Nanotechnology, John Wiley, 2006.
6. Supriyo Dutta, Quantum Transport- Atom to transistor, Cambridge, 2013.

ECP-14	Microwave Theory and Techniques					
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total
3	0	0	3	75	25	100
Course Outcomes						
CO1	Learner will be able to mathematically design basic resonator cavities and will be able to measure microwave parameters such as impedance, frequency and VSWR etc					
CO2	Learner will learn the conventional methods to generate the microwaves.					
CO3	Learner will know about the importance of scattering parameters along with its applications in the analysis of basic microwave components.					
CO4	Learner will learn about transferred electron and avalanche transit time devices in detail.					

UNIT-I

Introduction to Microwaves-History of Microwaves, Microwave Frequency bands, Applications of Microwaves: Civil and Military, Medical, EMI/ EMC, Effect of Microwaves on Human Body.

Mathematical Model of Microwave Transmission-Concept of Mode, Features of TEM, TE and TM Modes, Losses associated with microwave transmission, Concept of Impedance in Microwave Transmission.

Review of waveguides in brief, Coaxial Transmission Line, Strip line, Microstrip line.

Microwave Resonators: Cavity Resonators: Rectangular, Cylindrical, and Coaxial, Excitation and Coupling of cavities, Q factor.

UNIT-II

Microwave Measurements: Measurement of frequency, impedance (using slotted section) Attenuation, power, dielectric constant, measurement of V.S. W. R., Insertion loss and Permeability.

Microwave Generators: Construction, characteristics, operating principle and typical applications of Klystron(two cavity, multicavity), Reflex Klystron, Magnetron(Cylindrical magnetron and description of

Timode applications) and Traveling Wave Tube(TWT).

UNIT-III

Matrix Description of Microwave Circuits: Scattering Matrix: properties, measurement of scattering coefficients, scattering matrices for common microwave systems.

Passive and Active Microwave Devices- Microwave passive components: Directional Coupler, Power Divider, E Plane and H-Plane Tee, Magic Tee, Attenuator, Isolators, Circulator and Phase Shifter.

Microwave Active Components: Diodes, Transistors, Design Considerations of Filters, Amplifiers, Oscillators and Mixers (in Brief).

UNIT-IV

Solid State Microwave Devices: Transferred Electron Devices-Gunn Diode: Negative Differential Resistance Phenomenon, High Field Domain Formation. Avalanche Transit Time Devices: IMPATT, TRAPATT, BARITT diodes, Tunnel Diode, PIN Diode, Parametric amplifiers

Text Book: David M. Pozar, Microwave Engineering, John Wiley and sons Inc.

Reference Books:

1. Samuel Y. Liao, Microwave Devices and Circuits, Prentice-Hall of India.

2. Das, Annapurna & Sisir K. Das, Microwave Engineering, Tata McGraw-Hill.

3. R.E. Collins, Microwave Circuits, McGraw Hill.

EMBEDDED SYSTEMS							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time(Hrs)
Course Outcomes							
At the end of the course students will be able to							
CO1	Acquire knowledge about different types of Microcontrollers and various Embedded System design examples of real- life problems.						
CO2	Understand the PIC, AVR, ARM and SHARC architectures.						
CO3	Understand different types of I/O devices, Timer Devices and Communication Interfaces.						
CO4	Acquire knowledge about the design of RTOS and various operating systems.						

UNIT I

INTRODUCTION: Different types of Microcontrollers, 4-bit, 8-bit, 16-bit, and 32-bit Microcontrollers, Processor Architectures: Harvard & Princeton, CISC & RISC, Microcontrollers Memory Types, Microcontrollers Features, Criteria for Choosing a Microcontroller, Applications of Microcontrollers, Embedded System: Definition, Embedded Processors; Hardware Units, Devices and Software Tools in a System, Embedded System on Chip, Complex Systems Design and Processors, Design Challenges, Design Process and Design Examples.

UNIT II

PIC MICROCONTROLLER: Introduction to PIC16 Microcontroller Family, Features of PIC16C74, Architecture and Pin diagram of PIC16C74, Pipelining, Program Memory Considerations, Register File Structure, Addressing Modes, Instruction Sets; Advanced Architectures: Only Brief General Architecture of AVR, ARM and SHARC.

UNIT III

COMMUNICATION INTERFACES: I/O Devices Types and Examples, Serial Communication Devices, Parallel Device Ports, Wireless Devices, Timer and Counting Devices, Distributed Networked Embedded System Architecture, Serial Bus Communication Protocols- I²C, CAN, USB, FireWire and Advanced Buses; Parallel Bus Device Protocols- ISA, PCI, ARM and Advanced Buses; Network Protocols- HTTP, TCP, UDP, IP and Ethernet; Wireless and Mobile System Protocols- IrDA, Bluetooth, 802.11 and Zigbee; Device Drivers.

UNIT IV

RTOS: Architecture of Kernel, Processes, Threads, Task and Thread States, Task and Data, Distinction Between Function, ISR, IST and Task; Semaphores, Mutex, Event Registers, Pipes, Signal, Timers, Memory Management, Priority Inversion Problem, Disabling and Enabling Function, Queues and Mailboxes, Pipe and Sockets Functions;
Basic Design using a RTOS, RTOS Task-Scheduling Model, OS Standards: POSIX, Off-the-Shelf Operating System, Embedded Operating Systems, Real-Time Operating Systems, Handheld Operating Systems.

Text Books:

1. Raj Kamal, "Embedded systems architecture, programming and design", 3rd Ed., McGraw-Hill

Note: Separate question paper template will be provided to the paper setter for setting the question paper of end term semester examinations.

ROBOTICS							
ECP-16	Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total
	3	0	0	3	75	25	100
	3						3
	Transducers and Microprocessors.						
	Course Prerequisites						
	To enlighten the students about the fundamentals of robotic systems.						
	Course Outcomes						
	At the end of this course the student should be able to understand						
CO1	The basic concepts related to the Robot, parts of Robots, End Effectors and to make familiar with the various Drive systems for Robot.						
CO2	The operation of various Sensors and their Applications in Robots.						
CO3	The Machine Vision and its Applications, and various Control Systems used in Robots.						
CO4	The Robot Programming, Artificial Intelligence, Fuzzy Logic, Safety Standards of Robots and Industrial and Non-Industrial applications of Robots.						

UNIT I

FUNDAMENTALS OF ROBOT: Definition, History and Development in Robot Technology, Robot Technology, Robot and Future Applications, Basic Components, Robot Anatomy, Robot Generations, Robot Selection, Present and Future Applications.

ROBOTS DRIVE SYSTEMS AND END EFFECTORS: Robot Classification: Arm Geometry, Degrees of Freedom, Power Sources, Types of Motion, Path Control; Robot End Effectors: Mechanical Grippers, Vacuum, Magnetic, Adhesive; Special Purpose Grippers, Process Tooling, Compliance, Robot Drive Systems: Hydraulic, Pneumatic and Electric System.

UNIT II

SENSORS: Requirements of a Sensor, Sensor Classification; **Principle, Advantages, Disadvantages and Applications of the following Sensors:** Position Sensors - Potentiometer, Encoder, LVDT, Resolvers, LMDT and Hall-Effect Sensors; Velocity Sensors: Encoder, Tachometer and Differentiation of position signal; Acceleration Sensors, Force, Pressure Sensors: Piezoelectric, Force Sensing Resistor, Strain Gauge and Antistatic Foam; Torque Sensors, Micro Switches, Visible Light and Infrared Sensors, Touch and Tactile Sensors, Proximity Sensors: Magnetic, Optical, Ultrasonic, Inductive, Capacitive and Eddy Current; Range Finder: Ultrasonic, Light-base and GPS; Sniff Sensors, Taste Sensors, Vision Sensors, Voice Recognition Devices, Voice Synthesizers, RCC.

UNIT III

MACHINE VISION AND CONTROL SYSTEM: Visual Sensing, Architecture of Robotics Vision System, Machine Vision: Image Acquisition - Vidicon Tube and CCD; Digitization, Image Processing: Spatial Domain Operations, Noise Reduction and Edge Detection etc.; Image Analysis: Object Recognition by Features-Template Matching, Discrete Fourier Descriptors and Computed Tomography; Depth Measurement with Vision System, Image Interpretation, Segmentation by Region Growing and Region Splitting, Image Data Compression, Machine Vision Application, Other Optical Methods; Control Systems: Basic Robot Control System, PLC, PID, CNC, MPU, and URC.

UNIT IV

ROBOT PROGRAMMING, ARTIFICIAL INTELLIGENCE AND ROBOTS APPLICATIONS: Robot Programming: Programming Methods and Languages, Levels of Robot Programming, Space Position Programming, and Program Statements; Elements of Artificial Intelligence, System Architecture, Fuzzy Logic Control, Application of Fuzzy Logic in Robotics; Robot Safety, Safety Standards; Industrial Applications:

Automation in Manufacturing, Robot Applications: Material Handling, Processing Application, Assembly Application and Inspection Application; Evaluating the Potential of a Robot Application, Future Applications, Challenge, Innovations, Non-Industrial Application.

Note: Separate question paper template will be provided to the paper setter for setting the question paper of end term semester examinations.

ECP-17	Digital Image Processing					
Lecture	Tutorial	Practical	Major Test	Minor Test	Total	Time
3	0	0	75	25	100	3 Hr.
Course Outcomes						
CO1	Student will be able to explain basic concepts of image processing					
CO2	Student will be able to design evaluate image enhancement techniques					
CO3	Student will be able to analyze various compression and morphological operations					
CO4	Student will be able to describe various video processing systems					

Unit-I

Digital image processing fundamentals: Introduction, Image processing applications, Fundamental Steps in Digital Image Processing, Image Sampling and Quantization, Relationships between pixels, Color Fundamentals, color models.

Unit - II

Image Enhancement: Basics of intensity Transformations, Histogram processing, Spatial Domain filtering – Basics of Spatial Filtering, Smoothing and Sharpening Spatial Filtering.
Frequency Domain Filtering- Sampling and Fourier Transform of sampled functions, 2-D Sampling, Smoothing and Sharpening frequency domain filters – Ideal, Butterworth and Gaussian filters.

Unit - III

Image Compression: Fundamentals, Image Compression models, Error Free Compression – Huffman Coding, Arithmetic Coding, LZW Coding, Lossy Compression – Block transformcoding.
Morphological Image Processing: Introduction, Erosion and Dilaton, Opening and Closing, Hit or Miss Transformations, Boundary Extraction, Image Segmentation: Fundamentals of image segmentation, Point, Line, and Edge Detection.

Unit - IV

Video Processing: video formation, Video Frame classifications- I, P and B frames, Application of motion estimation in video coding, Patterns and Pattern classes - Recognition based on matching.

Text Books:

1. Rafael C. Gonzales, Richard E. Woods, "Digital Image Processing", Third Edition, Pearson Education, 2018.

Reference Books:

1. Rafael C. Gonzales, Richard E. Woods, Steven L. Eddins, "Digital Image Processing Using MATLAB", Third Edition Tata Mc Graw Hill Pvt. Ltd, 2011
2. Anil Jain K. "Fundamentals of Digital Image Processing", PHI Learning Pvt. Ltd, 2011.
3. M. Tekalp, Digital Video Processing. Signal Processing Series, Prentice Hall, 1995.
4. Malay K. Pakhira, "Digital Image Processing and Pattern Recognition", First Edition, PHI Learning Pvt. Ltd, 2011.

Note: Question paper template will be provided to the paper setter.

10. To measure the insertion loss and attenuation.

9. To measure the polar pattern and the gain of a waveguide horn antenna.

8. To measure the coupling coefficient and directivity of a waveguide directional coupler.

7. To study the isolator and attenuator.

6. To study the magic Tee.

5. To study the I-V characteristics of gunn diode.

4. To determine the standing wave ratio and reflection coefficient.

3. To determine the frequency and wavelength in a rectangular waveguide working in TE₁₀ mode.

2. To study the characteristics of the reflex Klystron tube and to determine its electronic tuning range.

1. To study microwave components.

List of Experiments:

Microwave Communication Lab							ECP-14L	
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Practical	Minor Test	Total	Time	
-	-	4	2	60	40	100	3 Hrs.	
Course Outcomes (CO) To give the students an idea about the study and analysis of components used in Microwave Engg.								
CO1	Students will learn the steps to analyze microwave components.							
CO2	Students will be able to find the characteristics of microwave components.							
CO3	Students will learn the steps to analyze various antennas.							
CO4	Students will be able to find the characteristics of various antennas.							

Embedded Systems Lab						
Lecture (Hrs.)	Tutorial Practical (Hrs.)	Credit	Practical	Minor Test	Total	Time
-	-	2	60	40	100	3 Hrs.
Course Outcomes (CO)						
To give the students an idea about the 8051/PIC/AVR/ARM microcontrollers						
CO1	To familiarization with 8051, PIC, AVR and ARM Microcontrollers.					
CO2	Ability to write an embedded C language and assembly language program for 8051, PIC and AVR Microcontrollers.					
CO3	Ability to interfacing the various Peripheral to 8051, PIC and AVR Microcontrollers.					
CO4	Ability to design the embedded systems based on 8051, PIC and AVR Microcontrollers.					

List of Experiments

1. Write an embedded C program using 8051/PIC/AVR Microcontroller for interfacing DC motor to rotate clockwise and anticlockwise directions.
2. Write an embedded C program using 8051/PIC/AVR Microcontroller for interfacing stepper motor to rotate clockwise and anticlockwise directions.
3. Write an embedded C program using 8051/PIC/AVR Microcontroller for interfacing LCD to display message "WELCOME" on LCD screen.
4. Write an embedded C program using 8051/PIC/AVR Microcontroller for interfacing a switch and a buzzer at two different pins of a Port such that the buzzer should sound as long as the switch is pressed.
5. Write an embedded C program using 8051/PIC/AVR Microcontroller for interfacing keypad to port P0. Whenever a key is pressed; it should be displayed on LCD screen.
6. Write an embedded C program using 8051/PIC/AVR Microcontroller for interfacing LEDs to glow them in different pattern.
7. Write an embedded C program for 8051/PIC/AVR Microcontroller to display 0 to 9 on 7 segment display.
8. Write an embedded C program using 8051/PIC/AVR Microcontroller for interfacing RTC module to display current date and time on LCD screen.
9. Write an embedded C program using 8051/PIC microcontroller for interfacing temperature sensor LM35 to display the current temperature on LCD screen.
10. Design an embedded system for traffic light controller using 8051/PIC Microcontroller.

Robotics lab							
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Practical	Minor Test	Total	Time
-	-	4	2	60	40	100	3 Hrs.
Course Outcomes (CO): To expose the students to the most recent technological developments in industrial Robot.							
CO1	To familiarization with FIRE BIRD Robot.						
CO2	Abilities to interfacing various peripherals.						
CO3	Student will be able to write embedded C language programming..						
CO4	Ability to design the automatic system for robotics based application.						

List of Experiments:

1. To get familiar with the AVR Studio 4.17 IDE and Fire Bird Robot.
2. Write a program for I/O interfacing to sense the pressing of push button Switch.
3. Write a program to alternately blink the set of LED
4. Write a program to display two digit numbers on LCD.
5. Write a program for obstacle detection of Robot
6. Write a program for controlling the speed of Fire Bird Robot.
7. Write a program for PWM based speed control of motor.
8. Write a program to design white line Follower Robot
9. To implement and design social distancing indicator and alarming system.
10. To Study implement the temperature based Fan speed controller.

Digital Image Processing Lab						
ECP-17L	Lecture (Hrs.)	Tutorial Practical (Hrs.)	Credit	Practical	Minor Test	Total Time
	-	-	2	60	40	100
	3 Hrs.					3 Hrs.
Course Outcomes (CO)						
To give the students an idea about the study and analysis of digital image processing						
CO1	Students will be able to explain the basics of Digital Image processing					
CO2	Student will be able to explain sampling and quantization of digital image.					
CO3	Student will be able to analyze the image enhancement operations on digital image.					
CO4	Students will be able to analyze various image analysis and computer vision algorithm					

List of Experiments

1. Study of Image processing toolbox of MATLAB.
2. WAP to read and show various images of at least five different formats.
3. WAP to extract R, G, B component of Color Image.
4. WAP to convert a color image into gray scale and save it in new format.
5. WAP to invert a gray scale image.
6. WAP to implement Morphological operations on an image.
7. WAP to implement Histogram equalization.
8. WAP to implement various edge detection algorithms.
9. WAP to implement image segmentation.
10. WAP to implement boundary extraction of basic structure.

Wireless & Mobile Communication								
ECP-18	Lecture	Tutorial	Practical	Credit	Major Tes t	Minor Te st	Total	
							Time	3 Hr.
	3	0	0	3	75	25	100	3 Hr.
Purpose								
To introduce the concepts of wireless/mobile communication using cellular environment to make the students know about the various modulation techniques, propagation methods, and multiple access techniques in the mobile communication.								
Course Outcomes								
CO 1	Ideals with the fundamental cellular radio concepts and generations of modern wireless communication.							
CO 2	This is to demonstrate the principle of trunking efficiency and how trunking and interference issues between mobile and base stations combine to affect the overall capacity of cellular systems.							
CO 3	It provides ideas about multiple access techniques used in wireless communication.							
CO 4	It presents different ways to wireless standards and mobility management.							

Unit-I

Introduction to Wireless Communication Systems: Evolution of mobile radiocommunications, examples of wireless comm. systems, paging systems, Cordless telephones systems, comparison of various wireless systems.

Modern Wireless Communication Systems: Second generation cellular networks, third generation wireless networks, wireless in local loop, wireless local area networks, Blue tooth and Personal Area networks.

Unit-II

Introduction to Cellular Mobile Systems: Spectrum Allocation, basic Cellular Systems, performance Criteria, Operation of cellular systems, analog cellular systems, digital Cellular Systems.

Cellular System Design Fundamentals: Frequency Reuse, channel assignment strategies, handoff strategies, interference and system capacity, tracking and grade off service, improving coverage and capacity.

Unit-III

Multiple Access Techniques for Wireless Communication: Introduction to Multiple Access, FDMA, TDMA, Spread Spectrum multiple Access, spacedivision multiple access, packet ratio, capacity of cellular systems.

Unit-IV

Wireless Standards-GSM, IS-95, UMTS-IMT-2000, Signaling, Call Control, Mobility Management and Location Tracing.

9	1999	1999
10	2000	2000

Bio-Medical Signal Processing						
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total
3	-	-	3	75	25	100
Purpose To understand the concept of Bio-Medical Signal Processing.						
Course Outcomes						
At the end of this course, student will be able to						
CO 1	Interpret signals and systems					
CO 2	Acquire Biomedical Signals such as ECG					
CO 3	Apply adaptive filtering algorithms in biomedical applications					
CO 4	Analyze different kinds of events and waveforms of biomedical origin					

Unit – I

Signals and Information: Definitions and properties of Laplace transform, Basic of DFT and FFT, z-

transform, Sampling theorem.

Linear Time-Invariant (LTI) Systems: definitions and properties; causality, stability, impulse response, convolution, poles and zeros, frequency response, group delay, phase delay, Applications of Digital Signal Processing.

Unit – II

Introduction to Biomedical Signal: General measurement and diagnostic system, classification of signals, introduction to biomedical signals, Biomedical signal acquisition and processing.

ECG: ECG signal origin, ECG parameters-QRS detection different techniques, ST segment analysis, Arrhythmia, Arrhythmia analysis, Arrhythmia monitoring system.

Unit – III

Adaptive Filtering: Introduction, General structure of adaptive filters, LMS adaptive filter, adaptive noise cancellation, cancellation of ECG from EMG signal, Cancellation of maternal ECG in fetal ECG.

EEG: EEG signal characteristics, Sleep EEG classification and epilepsy.

Unit – IV

Event Detection and waveform analysis: Need for event detection, Detection of events & waves, Correlation analysis of EEG signals, Identification of heart sounds, Morphological analysis of ECG waves.

Frequency Domain Analysis: Introduction, Spectral analysis, linear filtering, Removal of high frequency noise (power line interference), motion artifacts (low frequency) and power line interference in ECG.

Text Book:

1. Biomedical Signal Analysis" A case study approach, Rangaraj M Rangayyan, John Wiley publications.

Reference Books:

1. "Biomedical Signal Processing Time and Frequency Domains Analysis (Volume I)", Arnon Cohen, CRC press.

2. "Biomedical Signal Processing Principles and Techniques" D.C.Reddy, Tata Mc Graw-Hill

3. "Biomedical Digital Signal Processing", Willis J. Tompkins, PHI

Machine Learning						
ECP-20						
Lecture	Tutorial	Practical	Course Outcomes			3 Hr.
			Major Test	Minor Test	Total	
3	0	0	75	25	100	
CO1						
Recite and understand the knowledge of classification and associated algorithms						
CO2						
Explain and apply algorithms of statistical pattern recognition and supervised Learning						
CO3						
Explain, implement and apply algorithms of non-parametric learning, feature extraction and selection						
CO4						
Understand, explain and apply un-supervised learning, estimation and comparison of different classifiers						

UNIT-I

Classification: The Classification Process, Features, Training and Learning, Supervised Learning and Algorithm Selection, Approaches to Classification, Examples.
Nonmetric Methods: Introduction, Decision Tree Classifier, Information, Entropy, Impurity, Information Gain, Decision Tree Issues, Strengths and Weaknesses, Rule-Based Classifier, Other Methods.

UNIT-II

Statistical Pattern Recognition: Measured Data and Measurement Errors, Probability Theory, Simple Probability Theory, Conditional Probability and Bayes' Rule, Naive Bayes Classifier, Continuous Random Variables, The Multivariate Gaussian, The Covariance Matrix, The Mahalanobis Distance.

Supervised Learning: Parametric and Non-parametric Learning, Parametric Learning, Bayesian Decision Theory, Discriminant Functions and Decision Boundaries, MAP (Maximum A Posteriori) Estimator.

UNIT-III

Nonparametric Learning: Histogram Estimator and Parzen Windows, k-Nearest Neighbor (k-NN) Classification, Artificial Neural Networks, Kernel Machines.
Feature Extraction and Selection: Reducing Dimensionality, Preprocessing, Feature Selection, Inter/Intraclass Distance, Subset Selection, Feature Extraction, Principal Component Analysis, Linear Discriminant Analysis.

UNIT-IV

Unsupervised Learning: Clustering, k-Means Clustering, Fuzzy c-Means Clustering, (Agglomerative) Hierarchical Clustering.
Estimating and Comparing Classifiers: Comparing Classifiers and the No Free Lunch Theorem, Bias and Variance, Cross-Validation and Resampling Methods: The Holdout Method, k-Fold Cross-Validation, Bootstrap, Measuring Classifier Performance, Comparing Classifiers, ROC Curves, McNemar's Test, Other Statistical Tests, The Classification Toolbox, Combining Classifiers.

Artificial Intelligence							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Course Outcomes	
						Total	3Hr.
ECP-21						100	3Hr.
CO1							To familiarize the students with the fundamental concepts of Artificial Intelligence.
CO2							Students will be able to learn the detail knowledge of Supervised and Unsupervised Learning.
CO3							After this unit students will be able to understand the concepts of Genetic Algorithm and Object Detection and Tracking
CO4							Students will be able to understand the concept of Artificial Neural Networks and reinforcement learning.

UNIT-I

Introduction to Artificial Intelligence, need of AI, Applications of AI, Branches of AI, Defining intelligence using Turing Test, Classification, Preprocessing data, Label encoding, Logistic Regression classifier, Naïve Bayes classifier, Support Vector Machines.

UNIT-II

Regression, Building a single variable regressor, Building a multivariable regressor, Supervised and Unsupervised Learning, Detecting Patterns with Unsupervised Learning, Clustering data with K-Means algorithm, Estimating the number of clusters with Mean Shift algorithm,

UNIT-III

Genetic Algorithms, Fundamental concepts in genetic algorithms, Generating a bit pattern with predefined parameters Object Detection and Tracking: Frame differencing, Tracking objects using colorspaces, Object tracking using background subtraction, Face detection and tracking, Eye detection and tracking.

UNIT-IV

Artificial Neural Networks, Building a Perceptron based classifier, Constructing a single layer neural network, Constructing a multilayer neural network, Reinforcement Learning, Reinforcement learning versus supervised learning, Building blocks of reinforcement learning.

Text Book:

1. Introduction to Artificial Intelligence by Philip C. Jackson . 1974
2. Artificial Intelligence by Chris Neil . 2020
3. Artificial Intelligence with Python by Prateek Joshi.

Reference Book:

Internet of Things							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
ECP -22	3	0	0	3	75	25	3Hr.
Course Outcomes							
CO1	Understand what IoT technologies are used for today, and what is required in certain scenarios.						
CO2	Understand the types of technologies that are available and in use today and can be utilized to implement IoT solutions.						
CO3	Understand the type of protocols and challenges for designing IoT systems.						
CO4	Apply these technologies to tackle scenarios in teams of using an experimental platform for implementing prototypes and testing them as running applications. Understand operating system requirements of IoT.						

Unit 1
Introduction to IoT: Defining IoT, Characteristics of IoT, Functional blocks of IoT, Physical and logical design of IoT, Smart cities and IoT revolution, Difference between IoT and M2M, M2M and peer networking concepts IPv4 and IPV6, Software Defined Networks SDN,

Unit 2
Developing IoTs: IoT design methodology, case study on IoT system for weather monitoring. IoT system Management,
Developing IoT applications through embedded system platform: Introduction to sensors, IoT physical devices and endpoints, Raspberry pi, Arduino, arduino interfaces.

Unit 3
Protocols for IoT- messaging protocols, transport protocols, IPv4, Ipv6, URL, Cloud for IoT: IoT with cloud, challenges, introduction to fog computing, cloud computing, cloud challenges, security and legal considerations.

Unit 4
Logic design using Python: Introduction to python, data types, data structures, control flow, functions, modules, file handling and classes, implementing IoT concepts with python, Applications of IoT, Connected cars IoT Transportation, Smart Grid and Healthcare sectors using IoT,

Error Correcting Codes						
ECP-23						
Lecture	Tutorial	Practical	Major Test	Minor Test	Total	Time
3	0	0	75	25	100	3 Hr.
Course Outcomes						
CO1	Student will be able to evaluate linear codes					
CO2	Student will be able to evaluate cyclic codes					
CO3	Student will be able to evaluate BSH and RS codes					
CO4	Student will be able to evaluate convolution codes					

Unit- I

Basic concepts of linear codes: Three fields, linear codes, generator and parity matrix, dual codes, weights and distances, puncturing codes, extending codes, shortening codes, direct sums, permutation equivalent codes, Golay codes, RM Codes

Unit- II

Cyclic Codes: polynomials and euclidean algorithm, primitive elements, finite fields, subfields, field automorphism, cyclic codes and minimal polynomials, factoring $x^n - 1$, zeros of cyclic code, minimum distance of cyclic codes.

Unit- III

BCH and RS codes: BCH codes, RS Codes, generalized RS codes, decoding BCH codes, burst error, concatenated and interleaving codes.

Unit-IV

Convolution codes: generator matrices and encoding, viterbi decoding: state diagram, trellis, diagram and viterbi algorithm, canonical generator matrices, free distance.
Soft decision and iterative decoding: AWGN, soft decision viterbi decoding, general viterbi algorithm, two way app decoding.

ECP-24 Satellite Communication							
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total	Time
3	0	0	3	75	25	100	3 Hr.
Purpose To familiarize the students with the concepts of Satellite communication and various terms, laws and multiple access schemes used in its working.							
Course Outcomes							
CO1	To understand the concept of basics of satellite communication and various basic laws and terms of satellite communication.						
CO2	To understand the concept and processes of various communication satellites used in satellite communication.						
CO3	To familiarize with the concept and design issues of satellite link design and satellite access.						
CO4	To familiarize with the concepts of Multiple access schemes used in satellite communication.						

Unit -I
SATELLITE ORBITS: Orbital Mechanics- Kepler's laws, locating the satellite in the Orbit, locating the satellite with respect to the earth, Orbital elements, look angle determination, Sub satellite point, Azimuth and elevation angle calculation, Orbital perturbations, Longitudinal and Inclination changes; Launches and launch vehicles-ELV's, Placing the satellite into geostationary orbit, Doppler shift, range variations, solar eclipse, sun transit outage.

Unit -II
COMMUNICATION SATELLITES: Satellite Subsystems, Attitude and Orbit Control system(AOCS), Telemetry, Tracking, Command and Monitoring (TTCC&M), Power System, Communication Subsystems-description, Transponders, satellite antenna types, basic antennas in practice.

Unit -III
Satellite link design and Satellite access: Basic transmission theory, system noise temperature and G/T ratio; Downlink design-link budget; Uplink design; design for specified C/N, uplink and downlink attenuation in rain, communication link design procedure; system design examples.

Unit -IV
Multiple access schemes: FDMA, TDMA, CDMA, DAMA; VSAT systems-basic techniques, VSAT earth station engineering, system design; DBS systems-C-band and Ku band home TV, digital DBS; satellite mobile systems; GPS

Text Books:

Course Outcomes							
ECP-25 High Speed Electronics	Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	75
							25
				3	3 Hour	Total	100
							3 Hour
CO 1	Understand significance and the areas of application of high-speed electronics circuits.						
CO 2	Understand the properties of various components used in high speed electronics						
CO 3	Design High-speed electronic system using appropriate components.						
CO 4	To be able to understand the effect of scaling on high speed VLSI circuits.						

UNIT-I

Transit time of charge carriers, junction capacitances, ON-resistances and their dependence on the device geometry and size, carrier mobility, doping concentration and temperature. Contact resistance and interconnection/interlayer capacitances in the Integrated Electronics Circuits.

UNIT-II

Introduction to high-speed digital design: Frequency, time and distance - Capacitance and inductance effects - High speed properties of logic gates - Speed and power - Modelling of wires - Geometry and electrical properties of wires - Electrical models of wires - transmission lines - lossless LC transmission lines - lossy LRC transmission lines

UNIT-III

Devices: Passive and active, Lumped passive devices, Active : low frequency and high frequency models RF Amplifier Design, Stability, Low Noise Amplifiers, Broadband Amplifiers and Power Amplifiers, Class A, B, AB and C, D, E .

UNIT-IV

Impact of scaling on High Speed VLSI Circuit, Inter-Die Variation, Intra-Die Variation, Fail Causes Optimization Techniques for High Speed VLSI: Mathematical Optimization, Circuit optimization, CAD tool for optimization

Books:

Software Defined Radio						
Lecture	Tutorial	Practical	Credit	Major Test	Minor Test	Total
3	-	-	3	75	25	100
						3 Hrs.
Purpose						
To understand the underlying principles of Software Defined Radios and Cognitive Radio Networks.						
Course Outcomes						
CO1	Understand the principles behind the Software Defined Radios over the conventional Cognitive Radios					
CO2	Ability to analyze Software Defined Networking protocols and cognitive radio techniques					
CO3	Understand the data traversal over SDN					
CO4	Design algorithms for Software Defined Radio and cognitive radio environments					
CO5	Understand the various types of key routing and switching techniques used in adaptive networks.					

UNIT I

SOFTWARE DEFINED RADIO CONCEPTS

Need for Software Radios - Characteristics and Benefits of a Software Radio - Design Principles of a Software Radio - RF Receiver Front-End Topologies - Importance of the Components to Overall Performance - Transmitter Architectures and Their Issues - Noise and Distortion in the RF Chain ADC and DAC Distortion - Flexible RF Systems

UNIT II

SDR AS A PLATFORM FOR COGNITIVE RADIO

Hardware Architecture: Baseband Processors - Hardware Architecture: Multi-Core Systems - Software Architecture: Design Philosophies - GNU Radio - Software Communications Architecture - Application Software - Component Development - Waveform Development - Cognitive Waveform Development

UNIT III

COGNITIVE RADIO: TECHNOLOGIES REQUIRED

Software Capable Radios - Software Programmable Radios - SDR Examples - Aware Adaptive and CRS - Radio Capabilities and Properties Comparison - Spectrum Awareness and Frequency Occupancy - Software Technology - Funding and Researches in CRS - Directions and Standards

UNIT IV

OBJECT ORIENTED REPRESENTATION OF RADIOS

Introduction to Network Resources - Network Resources - Object Oriented Programming - Object Request Broker Architecture - Object Brokers and Software Radios - Mobile Application Environments - Security in Software Radios - Joint Tactical Radio Systems - SCA Architectures.

Wireless Communication Lab						
ECP-18L	Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Practical	Minor Test
-	-	-	4	2	60	40
-	-	-	-	-	100	3 Hrs.
Course Outcomes (CO)						
To give the students an idea about the Wireless communication theory and technology using the NI-Labview software and RF communication module.						
CO1	To study the wireless communication using NI-Labview					
CO2	To learn about the functioning of Universal Software Radio Peripheral (USRPs)					
CO3	To learn the implementation of different analog modulation schemes using the USRP					
CO4	To learn the implementation of different digital modulation schemes using the USRP.					

List of Experiments:

1. Introduction to NI-LabVIEW and familiarization with its basic functions.
2. Study of modulation toolkit and its usage in Wireless Communication.
3. Study the interfacing of hardware (USRPs module) with the PC and configuring the same.
4. Implementation of AM using Software Defined Radio (SDR).
5. Implementation of FM using SDR with application such as transfer of files
6. Implementation of M-PSK transmitter using SDR concept.
7. Implementation of M-PSK receiver using SDR
8. Implementation of M-QAM transmitter using SDR.
9. Demonstrates the use of the Bluetooth functions to set up data transfer via Bluetooth between a server VI and a client VI.
10. Design two-dimensional convolution to perform image edge detection.
11. Implementation of M-QAM receiver using SDR.
12. Implementation of PSK Modulation system with Convolutional Coding.
13. Implementation of FSK Modulation system with BCH Coding.
14. Implementation of QAM Modulation system with Golay Coding

Biomedical lab							ECP-19L	
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Practical	Minor Test	Total	3 Hrs.	Time
-	-	4	2	60	40	100		
Course Outcomes (CO)								
At the end of the course, student will be able to								
CO1	Elaborate various biomedical signals							
CO2	Acquire and simulate ECG, EMG and EEG biomedical signals							
CO3	Simulate ECG Pulse missing detector							
CO4	Demonstrate the functions of defibrillator and pacemaker							

List of Experiments:

1. Familiarization of various biomedical signals.
2. To simulate Electrocardiogram Waveform
3. To simulate Electroencephalogram Signal
4. To simulate Electromyogram Signal
5. To Simulate Defibrillator
6. To simulate Pacemaker
7. To simulate Haemodialysis Machine
8. To simulate Biopotential Amplifier
9. To simulate ECG Pulse missing detector.
10. To simulate 12 Lead ECG Signals.

Machine Learning Lab						
Lecture	Tutorial	Practical	Credit	Practical	Minor Test	Total
(Hrs.)	(Hrs.)	(Hrs.)				
-	-	4	2	60	40	100
						3 Hrs.
Course Outcomes (CO)						
At the end of the course, student will be able to						
CO1	Elaborate machine learning fundamentals					
CO2	Implement different classification/regression algorithms					
CO3	Design and develop artificial neural networks for different applications					
CO4	Develop clustering algorithms					

List of Experiments:

- To get familiarize with machine learning.
- Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file
- For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
- Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
- Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.
- Write a program to implement the naive Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
- Assuming a set of documents that need to be classified, use the naive Bayesian Classifier model to perform this task. Built-in MATLAB/Python/Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set
- Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for

- clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add MATLAB/Java/Python ML library classes/API in the program.
9. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. MATLAB/Java/Python ML library classes can be used for this problem
10. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.

Artificial Intelligence Lab							
Lecture	Tutorial	Practical	Credit	Practical	Minor test	Total	Time
0	0	4	2	60	40	100	3 Hr.
Course Outcomes							
At the end of the course student will be able to							
CO1	Implement AND/OR&NOT gate using single layer perception						
CO2	Implement XOR gate using multilayer perception						
CO3	Demonstrate the function of fuzzification/defuzzification processes						
CO4	Demonstrate different case studies in the domain						

List of Experiments:

1. Implementation of AND/OR/NOT Gate using Single Layer Perceptron
2. Implementation of XOR Gate Using Multi-Layer Perceptron/ Error Back Propagation
3. Implementation of XOR Gate Using Radial Basis Function Network
4. Understanding the concepts of Perceptron Learning Rule
5. Understanding the concepts of Hebbian Learning Rule
6. Understanding the concepts of Correlation Learning Rule
7. Understanding the working of Kohonen's Self Organising Maps
8. Understanding the functioning of Fuzzification process
9. Implementation of different method of Defuzzification process
10. Case study explaining function of Fuzzy Inference System
11. Case study explaining function of Optical Character Recognition

Internet of Things Lab							ECP-22L	
Lecture	Tutorial	Practical	Credit	Practical	Minor test	Total	Time	
-	0	4	2	60	40	100	3 Hr.	
Course Outcome: Students will be able to get the idea of Internet of Things technology.								
CO1	Student will be able to get familiarize with Arduino and Raspberry Pi							
CO2	Student will be able to implement interfacing different sensors with Arduino and Raspberry Pi							
CO3	Student will be able to understand the concept of cloud							
CO4	Student will be able to design module based on Internet of Things application							

List of Experiments

1. Familiarization with concept of IoT, Arduino/Raspberry Pi and perform necessary software installation.
2. To interface LED/Buzzer using relay with Arduino/Raspberry Pi and write a program to turn ON/OFF LED/Buzzer.
3. To interface Push button/Digital sensor (IR/LDR) with Arduino/Raspberry Pi and write a program to turn ON LED when push button is pressed.
4. To interface Analog sensors (Temperature/Humidity/Ultrasonic) with Arduino/Raspberry Pi and write a program to display sensors data on the computer screen.
5. To interface OLED with Arduino/Raspberry Pi and write a program to print sensor data on it.
6. To interface sensor with Arduino/Raspberry Pi and write a program to turn ON/OFF Relay when sensor data is detected.
7. To interface motor using relay with Arduino/Raspberry Pi and write a program to turn ON/OFF motor when push button is pressed.
8. To interface Bluetooth with Arduino/Raspberry Pi and write a program to send sensor data on smart phone using Bluetooth.
9. To interface Bluetooth with Arduino/Raspberry Pi and write a program to turn LED ON/OFF when a I/O is received from smartphone using Bluetooth.
10. Write a program to upload sensor data on cloud.
11. Write a program to retrieve sensor data from cloud.

Components required-

1. Arduino with cable
2. Raspberry Pi with cable and memory card
3. Node MCU
4. Sensors-IR, LDR, DHT11 sensor, Push button, Pressure sensor, Temperature sensor, Vibration, Rotation, Location, Torque, Sound, Weight etc.
5. Actuators-LED, Buzzer, Relay Switch, Motors, Motor Drivers, OLED, Display, Linear Actuator, Bluetooth Module, Wi-Fi Module, Ethernet Module
7. Smart Phone
8. Computer
9. Power Supply-5V, 12V, 3.3V
10. Internet facility

Augmented Reality/Virtual Reality Lab						
Lecture (Hrs.)	Tutorial (Hrs.)	Practical (Hrs.)	Credit	Practical	Minor Test	Total
-	-	4	2	60	40	100
3 Hrs.						
Course Outcomes (CO)						
To expose the students to the most recent technology i.e. Augmented Reality and Virtual Reality.						
CO1	Student will be able to familiarization of basics of Augmented Reality and Virtual Reality					
CO2	Student will be able to Design 3D Objects					
CO3	Student will be able to get an idea about the Vuforia.					
CO4	Student will be able to design Game in Unity 3D Project.					

List of Experiments

1. To get familiarization with the basics of AR/VR
2. Introduction to Unity 3D, and its game objects, materials, cameras, standard assets, asset store, adjusting size, position and rotation of game objects .
3. Program to Design 3D Modelling, Importing 3D models in Unity 3D, and to add buttons.
4. Program to Design of animating 3D models, adding material to 3d models
5. Program to Design User Interface using Unity 3D and customizing the colour, size, background, text etc. of the UI elements
6. To learn about Scripting; Adding scripts to game objects, controlling objects with scripts, button functionality with scripting.
7. Program to design Prefabs/Physics Elements, Creating prefabs, adding physics to game objects.
8. To learn about Vuforia SDK, Vuforia integration with Unity 3D, selecting a perfect image for AR development.
9. To design 2D game on Unity 3D
10. To learn about Scene Management in Augmented Reality Applications, MultiScene Arrangement in

Augmented Reality Applications

Note: the above mentioned experiments are not limited. Teacher may introduce new experiments

The following are the names of the persons who have been appointed to the various committees of the Board of Directors.

- 1. Finance Committee: Mr. J. H. Smith, Chairman; Mr. A. B. Jones, Mr. C. D. Brown, Mr. E. F. Green, Mr. G. H. White.
- 2. Audit Committee: Mr. J. H. Smith, Chairman; Mr. A. B. Jones, Mr. C. D. Brown, Mr. E. F. Green.
- 3. Compensation Committee: Mr. J. H. Smith, Chairman; Mr. A. B. Jones, Mr. C. D. Brown, Mr. E. F. Green.
- 4. Nominations Committee: Mr. J. H. Smith, Chairman; Mr. A. B. Jones, Mr. C. D. Brown, Mr. E. F. Green.
- 5. Executive Committee: Mr. J. H. Smith, Chairman; Mr. A. B. Jones, Mr. C. D. Brown, Mr. E. F. Green.
- 6. Risk Management Committee: Mr. J. H. Smith, Chairman; Mr. A. B. Jones, Mr. C. D. Brown, Mr. E. F. Green.
- 7. Sustainability Committee: Mr. J. H. Smith, Chairman; Mr. A. B. Jones, Mr. C. D. Brown, Mr. E. F. Green.
- 8. Information Technology Committee: Mr. J. H. Smith, Chairman; Mr. A. B. Jones, Mr. C. D. Brown, Mr. E. F. Green.
- 9. Legal and Compliance Committee: Mr. J. H. Smith, Chairman; Mr. A. B. Jones, Mr. C. D. Brown, Mr. E. F. Green.
- 10. Human Resources Committee: Mr. J. H. Smith, Chairman; Mr. A. B. Jones, Mr. C. D. Brown, Mr. E. F. Green.

Board of Directors

Name	Position	Term Expires
Mr. J. H. Smith	Chairman	2024
Mr. A. B. Jones	Director	2023
Mr. C. D. Brown	Director	2022
Mr. E. F. Green	Director	2021
Mr. G. H. White	Director	2020
